

Ahsay Microsoft Exchange Server Backup Solution v7

Backup of Microsoft Exchange Server Never Gets Easier

Testimonials

"Reasons that I decided to switch from Nxxxstor to Ahsay has been your customer support and specifically your responsiveness. Every company says they focus on support, but your effort is exceptional. Thank you."

Brendon Bullen

Ronin Data Backup Services

"Your Team has been instrumental and professional in helping us meet the requirements of our customers, as well as providing a reliable, sizable and low-cost online backup software. Thank you."

Maurice BENSOUSSAN

General Manager

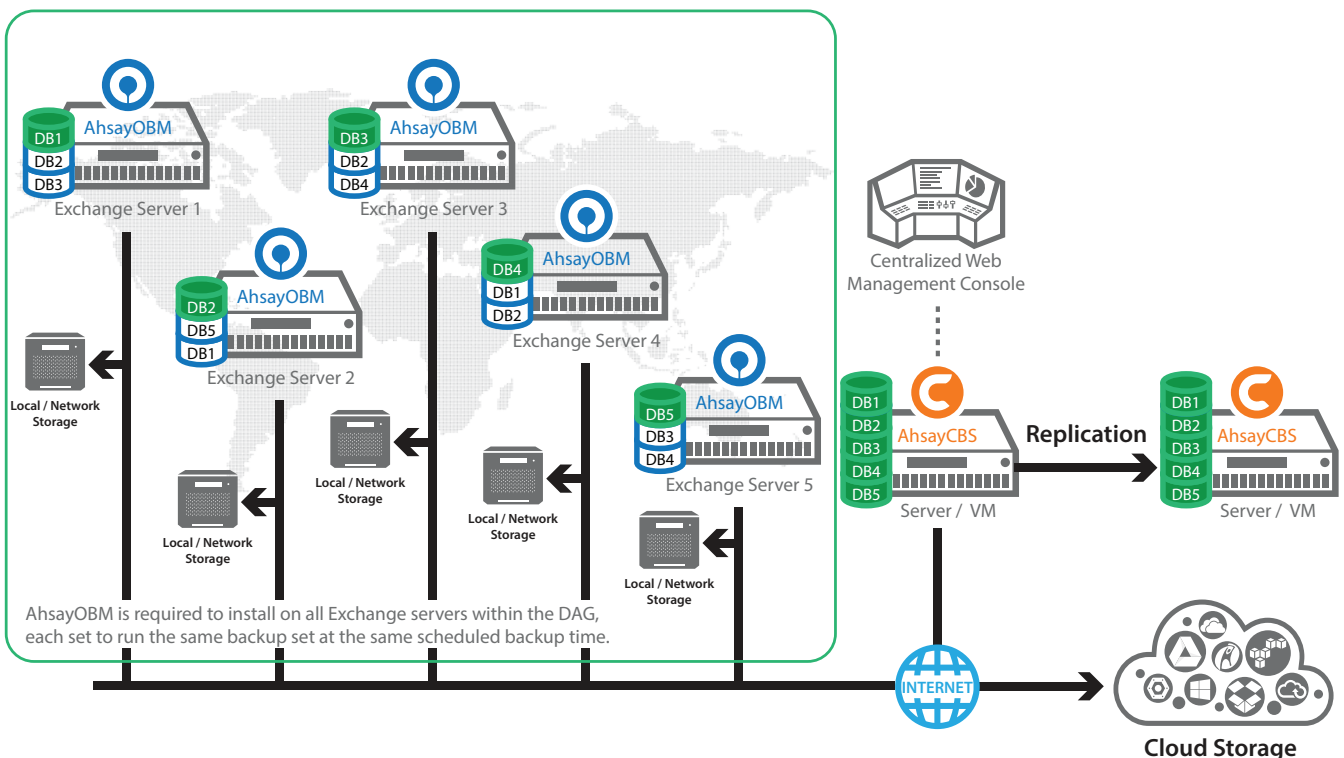

Sodexi DataCentre

Here at Ahsay, we have the tools and technology to ensure the availability of all Microsoft Exchange data. We bring you Microsoft Exchange backup solutions that can successfully take on the complex task of backing up exchange data. Whether you want to backup Exchange database or individual Exchange emails, you can count on the Ahsay backup utilities to deliver all the services you need.

Easy deployment

Deploying the Microsoft Exchange Server backup solution is a simple task. Install AhsayOBM client backup agent on the Exchange Server you need to protect, including all the servers within the DAG (Database Availability Group) locating in different geographical locations, and enable the Microsoft Exchange Server module and/or the Microsoft Exchange Mailbox module as necessary. After proper configuration of the backup source (the whole information store or mailbox items), backup schedule, destination and encryption, the selected Microsoft Exchange Server data will be backed up to local storage, network share, your centralized backup server (AhsayCBS) or cloud storage automatically according to the defined backup schedule.

MS Exchange Database Availability Group (DAG)

Testimonials

"We wanted to offer our customers the ability to backup their data to a remote location. The task seemed impossible; the software we found was either too expensive or failed to meet our standards. But late in the process we stumbled across Ahsay Offsite Backup Server. After heavy testing we came to the conclusion, that the software met our demands, including a broad range of features plus support for almost any OS. The software showed to be highly stable and the dialogue with the sales / support team was unexceptionable - we wanted to customize the software and they were more than helpful. We have now been running with Ahsay for almost two years and their continuous software development keeps amazing me. Altogether we are VERY satisfied with offering Ahsay Remote Backup to our customers."

"Ahsay Online Backup is a great product which has provided invaluable protection for our customers throughout the years. Our customers depend on our high quality services. We would not have been able to offer this without the help of Ahsay Online Backup. "

*Daniel Stanton
President
Y Vault Inc.*

"I used to stay behind every weekend after everyone left to do my weekly backup using CD-R. Now I don't have to do any work and can backup my data daily. Great work!"

*Tony Chan
IT Manager
Million Trader Limited, HK*

Brick-level backup of selected emails of individual mailboxes

Our Microsoft Exchange Server Mail-level backup solution allows you to perform brick-level backup instead of backing up the whole database of Microsoft Exchange Server. With just a few clicks, you can quickly back up your individual emails, contacts and calendars in the selected mailboxes.

Quick restore of individual emails without restoring whole Exchange database

If you lost or accidentally deleted some important emails, you can easily and quickly restore those emails to their original location with our Microsoft Exchange Server Mail-level backup solution without the need to restore the whole Exchange database.

Support geographically distributed configuration

Backup of Microsoft Exchange DAG is just a simple task by using our solution in conjunction with the AhsayOBM client-side backup application. Our Microsoft Exchange Server DAG solution supports backup and restore of Microsoft Exchange DAG at both database and mailbox levels, even if the nodes in the DAG are geographically distributed. All you need to do is install AhsayOBM on all Exchange servers within the DAG and set each server to run the same backup set at the same scheduled backup time.

Database hot backup

With our hot backup feature in the Microsoft Exchange Server Database backup solution, you can back up Microsoft Exchange Server while continuing to access the data 24x7 without service interruption. This lets users carry on working while the backup is performed.

In-File Delta incremental backup

With our In-File Delta incremental backup technology, only changed blocks are backed up each time. During restoration, these blocks will be combined with previous backups to synthesize a new full backup for quick recovery.

Multi-threading

The multi-threading implementation in our solution will utilize the computing power of multiple CPU cores for creating multiple backup and restore threads to give you super-fast Exchange Server backup and restore performance.

Lan-free backup

Our solution allows you to use fiber-channel and iSCSI SANs to reduce your network loading and increase the backup data transfer rate significantly.

Supported Microsoft Exchange Server Versions

Exchange Server 2007 (Standard/Enterprise)

Exchange Server 2010 (Standard/Enterprise)*

Exchange Server 2013 (Standard/Enterprise)*

Exchange Server 2016 (Standard/Enterprise)**

** Database Availability Group (DAG) for Exchange 2010 and 2013 are supported by AhsayOBM version 7.5.0.0 or above.*

*** Mail-level backup is not supported on Exchange Server 2016.*

Multi-destination backup to local and cloud destinations

You can back up the Exchange Server data to multiple destinations, including local drive of the Microsoft Exchange Server, network share, FTP/SFTP server, and public cloud storage sequentially or concurrently. You can be benefited from data redundancy as well as backup and restore flexibility.

Flexible retention policy

Our solution allows you to set flexible retention policies, including daily, weekly, monthly, yearly policies to suit your IT audit and compliance needs.

Unhackable 256-bit truly randomized encryption key

If you are backing up to public cloud, you can turn on the encryption feature which will by default encrypt the backup data locally with 256-bit truly randomized encryption key which is impossible to be hacked even by brute force attack by supercomputer.

Encryption key recovery

System administrator can force users to upload their hashed encryption key to the centralized management console so that when a user has lost his/her encryption key, the system administrator can engage our encryption key recovery service to get the key back for that user.

Manage all backup users through a centralized web console

In case you have many Microsoft Exchange Servers managed by many system administrators, our solution allows you to create multiple backup user accounts for these administrators in a centralized management software, and centrally monitor and manage their activities through a web console. Clear audit trail is available for tracking purpose.

Enterprise scalability

The scalable one to many server-client architecture is a highly scalable solution for MSPs with any number of users. For companies with large user bases, server-side redirector module can be utilized for redirecting users to different backup servers.

Fully rebrandable for MSPs

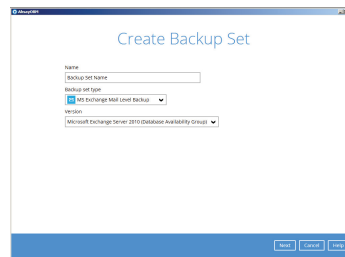

The whole Ahsay Microsoft Exchange Server backup solution is fully rebrandable for MSPs. All logo images and wordings in the software user interface can be customized. You can even hide the unwanted features to your users by using Group Policy feature in AhsayCBS centralized management console.

About Ahsay

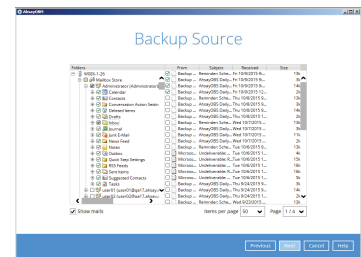

Established in 1999, Ahsay Systems Corporation Limited is now the world's leading backup software vendor trusted by over 7,000 worldwide customers and partners. Managed service providers and value-added resellers have been adopted our Rebrandable Option in offering branded backup services through public, private or hybrid deployments. We have been recognized as a Red Herring Asia Top 100 company, and awarded as the Best Business (Product) Certificate of Merit in HKICT Awards. Our best in class backup features, competitive pricing, and top notch customer support service enabled us to grow quickly in the past few years and get listed in the GEM Board of Hong Kong Stock Exchange (stock code 8290.HK) in 2015.
