# Trademarks

Ahsay, Ahsay Cloud Backup Suite, Ahsay Online Backup Suite, Ahsay Offsite Backup Server, Ahsay Online Backup Manager, Ahsay A-Click Backup, Ahsay Replication Server, Ahsay BackupBox Firmware, Ahsay Universal Backup System and Ahsay NAS Client Utility, Ahsay Mobile are trademarks of Ahsay Systems Corporation Limited.

Amazon S3 is a registered trademark of Amazon Web Services, Inc., or its affiliates.

Apple and Mac OS X, macOS, and iOS are registered trademarks of Apple Computer, Inc.

Dropbox is a registered trademark of Dropbox Inc.

Google Cloud Storage, Google Drive, Google Authenticator, and Android are registered trademarks of Google Inc.

Wasabi Hot Cloud Storage is a registered trademark of Wasabi Technologies Inc.

Backblaze B2 Cloud Storage is a registered trademark of Backblaze Inc.

MariaDB is a registered trademark of MariaDB Corporation AB.

Lotus, Domino, and Notes are registered trademark of IBM Corporation.

Microsoft Windows, Microsoft Exchange Server, Microsoft SQL Server, Microsoft Hyper-V, Microsoft Azure, OneDrive, OneDrive for Business, Microsoft Authenticator, and Microsoft Office 365 are registered trademarks of Microsoft Corporation.

Oracle and Java are registered trademarks of Oracle and/or its affiliates. Other names may be trademarks of their respective owners.

Oracle 11g, Oracle 12c, Oracle 18c, Oracle 19c, and MySQL are registered trademarks of Oracle Corporation.

Rackspace and OpenStack are registered trademarks of Rackspace US, Inc.

Red Hat, Red Hat Enterprise Linux, the Shadowman logo and JBoss are registered trademarks of Red Hat, Inc. www.redhat.com in the U.S. and other countries.

Linux is a registered trademark of Linus Torvalds in the U.S. and other countries.

Ubuntu is a registered trademark of Canonical Ltd.

ShadowProtect is a registered trademark of StorageCraft Technology Corporation.

VMware ESXi, vCenter, and vSAN are registered trademarks of VMware, Inc.

All other product names are registered trademarks of their respective owners.

# Disclaimer

Ahsay Systems Corporation Limited will not have or accept any liability, obligation or responsibility whatsoever for any loss, destruction or damage (including without limitation consequential loss, destruction or damage) however arising from or in respect of any use or misuse of reliance on this document. By reading and following the instructions in this document, you agree to accept unconditionally the terms of this Disclaimer and as they may be revised and/or amended from time to time by Ahsay Systems Corporation Limited without prior notice to you.

## Revision History

Date	Descriptions	Type of modification
5 February 2021	Added MariaDB in Ch. 6.5 and 7	Modification
7 April 2021	Updated Ch. 8; added sub-chapters for the detailed process diagrams in Ch. 8.1, 8.2, 8.2.1, 8.2.2 and 8.3	Modifications
25 May 2021	Reorganized Linux Packages in Ch. 2.3, Added requirement in Ch. 2.4; Added note in Ch. 4, Reorganized and updated Ch. 4.1 and 4.2; Modified Appendices D, E, F and L	New / Modifications
18 June 2021	Added note on save password in Ch. 5 and Appendix K	New

# 1 Overview

## 1.1 What is this software?

Ahsay brings you specialized client backup software, namely AhsayOBM, to provide a comprehensive backup solution for protecting file(s) / folder(s) on your machine, with a wide variety of backup destinations (major cloud storage service providers, FTP/SFTP, local drive, etc.) of your choice.

## 1.2 System Architecture

Below is the system architecture diagram illustrating the major elements involved in the backup and restore process among the backup machine, AhsayOBM and AhsayCBS.

In this user guide, we will focus on the software installation, as well as the end-to-end backup and restore process using the AhsayOBM as a client backup software.

## 2 System Requirements

### 2.1 Supported Platforms

Refer to the following KB article for the list of supported operating systems:

FAQ: Ahsay Software Compatibility List (SCL) for version 8.1 or above

<https://wiki.ahsay.com/doku.php?id=public:8001>

### 2.2 Best Practices and Recommendations

#### Periodic Backup Schedule

The periodic backup schedule should be reviewed regularly to ensure the interval is sufficient to handle the data volume on the machine. Over the time, data usage pattern may change on a production server, i.e., the number of new files created, the number of files which are updated/delete, new users may be added etc.

When using periodic backup schedules with small backup intervals such as backup every 1 minute, 2 minutes, 3 minutes etc. although the increased backup frequently does ensure that changes to files are captured regularly which allows greater flexibility in recovery to a point in time.

Consider the following key points to efficiently handle backup sets with periodic backup schedule.

- Hardware – to achieve optimal performance, compatible hardware requirements is a must. Ensure you have the backup machine's appropriate hardware specifications to accommodate frequency of backups,
  - so that the data is always backed up within the periodic backup interval
  - so that the backup frequency does not affect the performance of the production server
- Storage – ensure you have enough storage quota allocated based on the amount of new data and changed data you will backup.
- Retention Policy – also make sure to consider the retention policy settings and retention area storage management which can grow because of the changes in the backup data for each backup job.

## 2.3 Linux Packages

The following packages have to be present on the Linux machine in order for AhsayOBM version 8 to be installed.

- **GNU LIBC 2.14** <https://www.gnu.org/software/libc/>

The installed ‘GNU LIBC’ version must at least be 2.14 for OpenJDK 8 to work.

- **psmisc** <http://psmisc.sourceforge.net/>

The ‘psmisc’ package which contains the ‘fuser’ components must be installed for the auto update agent (AUA) process to work properly for AhsayOBM on Linux.

- **curl** <https://curl.haxx.se>

The ‘curl’ command is used by both the AhsayOBM SH online installer and RPM online installer to download components from AhsayCBS server during the installation process.

- **tar** <https://www.gnu.org/software/tar>

The ‘tar’ command is used by both the AhsayOBM TAR GZ offline installer and RPM online installer to uncompress and extract installation files or components downloaded from the AhsayCBS backup server onto the Linux machine.

- **rpm** <http://rpm.org>

The ‘rpm’ package must be installed to use the AhsayOBM RPM online installer method on CentOS and Red Hat Enterprise Linux platforms.

- **dpkg**

Debian <https://packages.debian.org/buster/dpkg>

Ubuntu <https://packages.ubuntu.com/trusty/dpkg>

The ‘dpkg’ package must be installed to support AhsayOBM DEB online installer method on Debian and Ubuntu platforms.

## 2.4 Network Bandwidth

10 Mbps or above connection speed.

### 3 Getting started

This quick start guide will walk you through the following 5 major parts to get you started with using AhsayOBM.

#### Download and Install

Download and Install AhsayOBM  
on your Linux machine

#### Launch AhsayOBM

Launch and log in to AhsayOBM

#### Create File Backup Set

Create backup set according to  
your preferences

#### Run Backup Jobs

Run the backup job to back up  
data

#### Restore Data

Restore backed up data to your  
system

## 4 Download and Install AhsayOBM

There are two installation modes of AhsayOBM, online installation and offline installation. Below is the table of comparison between online installation and offline installation.

	<b>Online Installation</b>	<b>Offline Installation</b>
<b>Installation Time</b>	<ul style="list-style-type: none"><li>➤ Takes more time as it needs to download the binary and component files (80MB to 132MB depending on operating system) each time the installation is run.</li><li>➤ Online installer size is 6KB to 3.5MB depending on operating system as it contains only the initial installation package files.</li></ul>	<ul style="list-style-type: none"><li>➤ Takes less time as all the necessary binary and component files are already available in the offline installer and offline installer can be downloaded once but reused many times.</li><li>➤ Offline installer size is 80MB to 132MB depending on operating system as it contains all the necessary binary and component files.</li></ul>
<b>Deployments</b>	<ul style="list-style-type: none"><li>➤ Suitable for single or small amount of device installations.</li><li>➤ Suitable for sites with fast and stable internet connection as internet connection is needed each time when an installation is run.</li><li>➤ A slow internet connection will result in longer installation time and interrupted, or unstable internet connection may lead to unsuccessful installation.</li><li>➤ Ensures the latest version of the product is installed.</li></ul>	<ul style="list-style-type: none"><li>➤ Suitable for multiple or mass device installations.</li><li>➤ Suitable for client sites with metered internet connections as once the offline installer is downloaded, internet connection is not needed each time when an installation is run.</li><li>➤ May need to update the product version after installation if an older offline installer is used.</li></ul>

### NOTE:

The following platforms only support online installation:

1. Debian and Ubuntu – using deb package
2. CentOS and Red Hat – using rpm package

## 4.1 Online Installation

### 4.1.1 SH online installer

1. Log in to the Linux machine via a ssh client using the root account.

2. Create a new directory for AhsayOBM installation using the following script.

```
# mkdir -p /usr/local/obm  
# cd /usr/local/obm
```

3. Go to the download page of your backup service provider's website to download the AhsayOBM **SH online installer**.

4. Right click on the **SH online installer** link, then copy the link address of the AhsayOBM installer.

5. Use the **curl** command with the copied link address to download the AhsayOBM installer from the backup service provider's website onto the Linux machine.

```
# curl -Ok https://10.120.10.12/cbs/download/obm-nix-443-  
10.120.10.12-https-00.sh?dlName=obm-linux-443-10.120.10.12-  
https-00.sh  
% Total % Received % Xferd Average Speed Time Time  
Time Current
```

Spent	Left	Speed	Dload	Upload	Total
100 17971	100 17971	0	0	9568	0 0:00:01 0:00:01 --:--:-- 9735

6. Rename the file by removing the characters from "?" until the end. In the example below, remove the characters highlighted in red:

obm-nix-443-10.120.10.12-https-0O.sh?dlName=obm-linux-443-10.120.10.12-https-0O.sh --> obm-nix-443-10.120.10.12-https-0O.sh

You may perform the renaming of file using the **mv** command:

```
# mv obm-nix-443-10.120.10.12-https-0O.sh?dlName=obm-linux-443-10.120.10.12-https-0O.sh obm-nix-443-10.120.10.12-https-0O.sh
# ls -la
total 24
drwxr-xr-x. 2 root root 55 May 6 15:56 .
drwxr-xr-x. 22 root root 268 May 6 15:53 ..
-rw-r--r--. 1 root root 24034 May 6 15:53 obm-nix-443-10.120.10.12-https-0O.sh
```

7. Add the executable permissions to the AhsayOBM install script.

```
# chmod 755 obm-nix-443-10.120.10.12-https-0O.sh
```

8. Run the AhsayOBM installation script. At the end of the script, the installation path and "Done" will be shown to indicate that the AhsayOBM installation is successful.

**NOTE:** The .sh script file should be copied and run under the directory path where you want the AhsayOBM application to be installed, i.e., /usr/local/obm

```
# ./obm-nix-443-10.120.10.12-https-0O.sh

#### 4.1.2 RPM online installer

1. Log in to the Linux machine via a ssh client using the root account.

2. Create a new directory for AhsayOBM installation using the following script.

```
# mkdir -p /usr/local/obm  
# cd /usr/local/obm
```

3. Go to the download page of your backup service provider's website to download the AhsayOBM **RPM online installer**.

4. Right click on the **RPM online installer** link, then copy the link address of the AhsayOBM installer.

5. Use the **curl** command to download the AhsayOBM installer from the backup service provider's website onto the Linux machine.

```
# curl -Ok https://10.120.10.12/cbs/download/obm-linux-noarch-443-10.120.10.12-https-00.rpm  
% Total    % Received % Xferd  Average Speed   Time     Time

7. Check if the AhsayOBM is installed correctly by running the following script.

```
Name        : obm
Version     : 8.5.2.0
Release     : 0
Architecture: noarch
Install Date: Thu 06 May 2021 05:03:11 PM +08
Group       : Applications/System
Size        : 24034
License     : GPLv2+
Signature   : (none)
Source RPM  : obm-8.5.2.0-0.src.rpm
Build Date  : Wed 28 Apr 2021 05:34:11 PM +08
Build Host  : cxb-cos6x.releng.dev.test
Relocations : (not relocatable)
URL         : www.ahsay.com
Summary     : Ahsay Online Backup Manager
Description  :
Ahsay Online Backup Manager
```

#### 4.1.3 DEB online installer

1. Log in to the Debian or Ubuntu machine via a ssh client using the root account.

2. Create a new directory for AhsayOBM installation using the following script.

```
# mkdir -p /usr/local/obm  
# cd /usr/local/obm
```

3. Go to the download page of your backup service provider's website to download the AhsayOBM **DEB online installer**.

4. Right click on the **DEB online installer** link, then copy the link address of the AhsayOBM installer.

5. Use the **curl** command to download the AhsayOBM installer from the backup service provider's website onto the Debian or Ubuntu machine.

```
# curl -Ok https://10.120.10.12/cbs/download/obm-ubuntu-noarch-  
443-10.120.10.12-https-00.deb?dlName=obm-ubuntu-noarch-443-  
10.120.10.12-https-00.deb  
% Total % Received % Xferd Average Speed Time Time  
Time Current  
Dload Upload Total Spent Left Speed
```

100	5768	100	5768	0	0	236	0	0:00:24	0:00:24
				---	---	237			

6. Rename the file by removing the characters from "?" until the end. In the example below, remove the characters highlighted in red:

```
obm-ubuntu-noarch-443-10.120.10.12-https-0O.deb?dlName=obm-ubuntu-noarch-443-  
10.120.10.12-https-0O.deb --> obm-ubuntu-noarch-443-10.120.10.12-https-0O.deb
```

You may perform the renaming of file using the **mv** command:

```
# mv obm-ubuntu-noarch-443-10.120.10.12-https-0O.deb?dlName=obm-  
ubuntu-noarch-443-10.120.10.12-https-0O.deb obm-ubuntu-noarch-  
443-10.120.10.12-https-0O.deb  
  
# ls -la  
total 24  
drwxr-xr-x. 2 root root 55 May 6 15:56 .  
drwxr-xr-x. 22 root root 268 May 6 15:53 ..  
-rw-r--r--. 1 root root 24034 May 6 15:53 obm-ubuntu-noarch-  
443-10.120.10.12-https-0O.deb
```

7. Run the **dpkg** command to install AhsayOBM.

```
# dpkg -i obm-ubuntu-noarch-443-10.120.10.12-https-0O.deb  
Selecting previously unselected package obm.

Description: Ahsay Online Backup Manager  
Ahsay Online Backup Manager
```

## 4.2 Offline Installation

### TAR GZ offline installer

1. Log in to the Linux machine via a ssh client using the root account.

2. Create a new directory for AhsayOBM installation using the following script.

```
# mkdir -p /usr/local/obm  
# cd /usr/local/obm
```

3. Go to the download page of your backup service provider's website to download the AhsayOBM **TAR GZ offline installer**.

4. Right click on the **TAR GZ offline installer** link, then copy the link address of the AhsayOBM installer.

5. Use the **curl** command to download the AhsayOBM installer from the backup service provider's website onto the Linux machine.

```
# curl -O https://10.120.10.12/cbs/download/obm-linux.tar.gz  
% Total    % Received % Xferd  Average Speed   Time     Time  
Time Current  
Dload Upload Total  Spent   Left  Speed  
100  287M    0 287M    0      0  198k      0 --:--:--  
0:24:43 --:--:-- 62707
```

6. Run the **tar** command to extract the package component files.

```
# tar xvzf obm-linux.tar.gz
app.pkg/version.txt
app.pkg/app-common.tar.gz
app.pkg/app-native-nix-x64.tar.gz
app.pkg/app-native-nix-x86.tar.gz
app.pkg/app-nix-obm.tar.gz
app.pkg/aua-common.tar.gz
app.pkg/aua-native-nix-x64.tar.gz
app.pkg/aua-native-nix-x86.tar.gz
app.pkg/aua-nix-obm.tar.gz
app.pkg/util-common.tar.gz
app.pkg/util-nix-obm.tar.gz
app.pkg/properties-common.tar.gz
app.pkg/app-inst-nix-obm.tar.gz
app.pkg/aua-inst-nix-obm.tar.gz
app.pkg/jre-std-linux-amd64.tar.gz
app.pkg/jre-std-linux-x86-586.tar.gz
app.pkg/app-native-nix-others.tar.gz
app.pkg/aua-native-nix-others.tar.gz
obm-linux.sh
```

7. Use the **sh** command to install AhsayOBM.

```
sh obm-linux.sh
Log Time: Fri May 7 10:32:21 +08 2021

### 4.3 AhsayOBM Scheduler Service Check

The AhsayOBM scheduler service is used to kick automated or scheduled backup jobs, to check if the AhsayOBM scheduler service is running use the **ps** command.

```
# ps -ef|grep java
root      11569     1  9 10:35 pts/0    00:00:09
/usr/local/obm/jvm/bin/bschJW -Xms128m -Xmx768m -
Dsun.nio.PageAlignDirectMemory=true -Djava.library.path=. -
cp ../../cbs.jar cbs /usr/local/obm
root      11676 10144  0 10:37 pts/0    00:00:00 grep --color=auto
java
```

1. To manually start the scheduler service, use the **/usr/local/obm/bin/Scheduler.sh** script.
2. To manually stop the scheduler service, use the **/usr/local/obm/bin/StopScheduler.sh** script.

### 4.4 RunLevel Symlink Check

During installation, the following symlinks to the scheduler startup script **/etc/init.d/obmscheduler** will be created for Runlevels 2 to 5, to allow the AhsayOBM scheduler service to be started up automatically each time after the Linux machine is rebooted or restarted.

To verify the symlinks have been created correctly:

**Example:** Ubuntu 16.04 LTS

```
# ls -la /etc/rc[2-5].d/*obm*
lrwxrwxrwx 1 root root 24 Jan 10 17:09 /etc/rc2.d/S99obmscheduler
  -> /etc/init.d/obmscheduler
lrwxrwxrwx 1 root root 24 Jan 10 17:09 /etc/rc3.d/S99obmscheduler
  -> /etc/init.d/obmscheduler
lrwxrwxrwx 1 root root 24 Jan 10 17:09 /etc/rc4.d/S99obmscheduler
  -> /etc/init.d/obmscheduler
lrwxrwxrwx 1 root root 24 Jan 10 17:09 /etc/rc5.d/S99obmscheduler
  -> /etc/init.d/obmscheduler
#
```

**Example:** CentOS 7

```
# ls -la /etc/rc.d/rc[2-5].d/*obm*
lrwxrwxrwx. 1 root root 24 Jan 15 10:35
/etc/rc.d/rc2.d/S99obmscheduler -> /etc/init.d/obmscheduler
lrwxrwxrwx. 1 root root 24 Jan 15 10:35
/etc/rc.d/rc3.d/S99obmscheduler -> /etc/init.d/obmscheduler
lrwxrwxrwx. 1 root root 24 Jan 15 10:35
/etc/rc.d/rc4.d/S99obmscheduler -> /etc/init.d/obmscheduler
lrwxrwxrwx. 1 root root 24 Jan 15 10:35
/etc/rc.d/rc5.d/S99obmscheduler -> /etc/init.d/obmscheduler
```

## 5 Starting AhsayOBM

To startup AhsayOBM and connect to AhsayCBS, you need to use the **RunConfigurator.sh** script to configure the backup server URL, port and proxy server settings (if applicable) and enter the user id and password.

When you login for the first time, the Free Trial Registration option will be displayed. If you want to create a free trial account, please proceed to [Appendix K](#). Otherwise, proceed to the next step below.

```
# cd /usr/local/obm/bin  
# sh RunConfigurator.sh  
  
Startup Ahsay Online Backup Manager ...  
User Configuration file not found  
Create a new Configuration file at directory  
[/root/.obm/config]  
  
Login Menu (No configuration files found)  
-----  
 (1). Login  
 (2). Free Trial  
 (3). Quit  
-----  
Your Choice:
```

### NOTE

The Free Trial Registration option may not be available. This depends on the settings of your backup service provider. Please contact your backup service provider for more information.

**Please contact your backup service provider to obtain your user login and password and backup server URL settings.**

```
# cd /usr/local/obm/bin  
# sh RunConfigurator.sh  
  
Startup Ahsay Online Backup Manager ...  
Config file found  
  
Login Menu  
-----  
 (1). Login  
 (2). Change Network Settings  
 (3). Forgot Password  
 (4). Quit  
-----  
Your Choice:
```

Once the AhsayOBM started, login menu will be displayed. If you want to modify the **network settings** before you log in, select option **(2)**.

*Login Menu*

- (1). Login  
(2). Change Network Settings  
(3). Forgot Password  
(4). Quit

-----  
*Your Choice: 2*

*Network Setting*

- (1). Backup Server URL [10.16.30.22]  
(2). Port [80]  
(3). Protocol [http]  
(4). Proxy Setting [Not in Use]  
(5). Save and Return  
(6). Discard and Return

-----  
*Your Choice:*

Otherwise, select option **(1)**. Input your Login name and password to log in.

*Login Menu*

- (1). Login  
(2). Change Network Settings  
(3). Forgot Password  
(4). Quit

-----  
*Your Choice: 1*

*Login Name : sample*

*Password : \*\*\*\*\**

*Please wait while verifying user account with server...*

*Your profile has been downloaded and updated.*

*Main Menu*

- (1). List Backup Sets  
(2). Delete Backup Set  
(3). Export Backup Set Settings to XML  
(4). Import Backup Set Settings from XML  
(5). Generate new Backup Set Settings Template  
(6). Change Language [English]  
(7). Update Profile Settings

(8). Quit

-----  
Your Choice:

- If Multi-Factor Authentication is enabled, press Enter to continue then provide your country code, phone number and email. A passcode will be sent to the phone number provided. Enter the passcode to continue logging in. The MFA Configuration screen will only be displayed when you log in for the first time.

## 6 AhsayOBM Main Menu

Once you have successfully logged on to AhsayOBM, the **main menu** will be displayed.

*Main Menu*

- 
- (1). *List Backup Sets*
  - (2). *Delete Backup Set*
  - (3). *Export Backup Set Settings to XML*
  - (4). *Import Backup Set Settings from XML*
  - (5). *Generate new Backup Set Settings Template*
  - (6). *Change Language [English]*
  - (7). *Update Profile Settings*
  - (8). *Quit*

### 6.1 List Backup Sets

By selecting option **(1)**, the list of backup sets you have created will be shown.

*Main Menu*

- 
- (1). *List Backup Sets*
  - (2). *Delete Backup Set*
  - (3). *Export Backup Set Settings to XML*
  - (4). *Import Backup Set Settings from XML*
  - (5). *Generate new Backup Set Settings Template*
  - (6). *Change Language [English]*
  - (7). *Update Profile Settings*
  - (8). *Quit*

*Your Choice: 1*

*Select a Backup Set to show more details*

- 
- (1). *Daily Backup*
  - (2). *Sample Backup*
  - (3). *AhsayOBM Backup*
  - (4). *OBM Backup*

-----  
*Your Choice:*

To show more details of a specific backup set, choose a backup set to display.

*Select a Backup Set to show more details*

- 
- (1). Daily Backup
  - (2). Sample Backup
  - (3). AhsayOBM Backup
- 

Your Choice: 1

Name : Daily Backup  
Owner : centos7  
Type : FILE  
Selected Source : /root/Documents  
Selected Source : /mnt  
Selected Source : /etc  
Selected Source : /home  
Deselected Source : /root/.obm  
Deselected Source : /usr/local/obm  
Deselected Source : /root/temp  
Destination Name : AhsayCBS, Type: OBS  
Encryption Key : abc123\$%  
Encryption Algorithm : AES  
Encryption Mode : CBC  
Encryption Key Length: 256

Press Enter to continue...

No backup set will be shown if no backup set has been created yet.

*Main Menu*

- 
- (1). List Backup Sets
  - (2). Delete Backup Set
  - (3). Export Backup Set Settings to XML
  - (4). Import Backup Set Settings from XML
  - (5). Generate new Backup Set Settings Template
  - (6). Change Language [English]
  - (7). Update Profile Settings
  - (8). Quit
- 

Your Choice: 1

No backup set has been created yet.

## 6.2 Delete Backup Set

Select option **(2)** from the main menu if you wish to delete a backup set.

Main Menu

- 
- (1). List Backup Sets
  - (2). Delete Backup Set
  - (3). Export Backup Set Settings to XML
  - (4). Import Backup Set Settings from XML
  - (5). Generate new Backup Set Settings Template
  - (6). Change Language [English]
  - (7). Update Profile Settings
  - (8). Quit
- 

Your Choice: 2

Choose your backup set to delete

- 
- (1). Daily Backup
  - (2). Sample Backup
  - (3). AhsayOBM Backup
  - (4). OBM Backup
- 

Your Choice:

Select a backup set you want to delete. Once selected, choose “Y” to confirm deletion and the backup set will be deleted successfully.

**Note:** If you choose “Y”, the selected backup set and all its backed-up data will be deleted.

Choose your backup set to delete

- 
- (1). Daily Backup
  - (2). Sample Backup
  - (3). AhsayOBM Backup
  - (4). OBM Backup
- 

Your Choice: 4

Name : OBM Backup  
Owner : centos7  
Type : FILE  
Encryption Key : abc123\$%  
Encryption Algorithm : AES  
Encryption Mode : CBC  
Encryption Key Length: 256

Are you sure you want to delete this backup set? (Y/N) ? y

Backup set deleted

## 6.3 Export Backup Set Settings to XML

This feature is used to export a backup set to XML file if you want to modify the backup set settings.

To do this, select option **(3)** on the main menu.

<p>Main Menu</p> <p>-----</p> <p>(1). List Backup Sets (2). Delete Backup Set (3). Export Backup Set Settings to XML (4). Import Backup Set Settings from XML (5). Generate new Backup Set Settings Template (6). Change Language [English] (7). Update Profile Settings (8). Quit</p> <p>-----</p> <p>Your Choice: 3</p> <p>Choose your backup set to generate XML file</p> <p>-----</p> <p>(1). Daily Backup (2). Sample Backup (3). AhsayOBM Backup (4). OBM Backup</p> <p>-----</p> <p>Your Choice:</p>
---

Select a backup set. An XML file will be generated and exported to the **/root/.obm/config** directory.

**Note:** The **/root/.obm/config** folder cannot be changed.

<p>Choose your backup set to generate XML file</p> <p>-----</p> <p>(1). Daily Backup (2). Sample Backup (3). AhsayOBM Backup (4). OBM Backup</p> <p>-----</p> <p>Your Choice: 4</p> <p><i>XML file successfully exported to /root/.obm/config/backupSet.xml</i></p> <p>Main Menu</p> <p>-----</p> <p>(1). List Backup Sets (2). Delete Backup Set (3). Export Backup Set Settings to XML (4). Import Backup Set Settings from XML</p>
---

- (5). Generate new Backup Set Settings Template
  - (6). Change Language [English]
  - (7). Update Profile Settings
  - (8). Quit
- 

Your Choice:

**Note:** To see the list of all configurable items with their available options, please refer to [Appendix B](#) File Backup Set XML Template (with explanation).

To see instructions on how to configure the backup set setting, please refer to number **3 Configuring Backup Set Settings** in [Chapter 6.2](#).

## 6.4 Import Backup Set Settings from XML

This option allows user to import the updated backupSet.xml file to the AhsayCBS server.

Select option **(4)** to import the backup set XML file.

Main Menu

---

- (1). List Backup Sets
  - (2). Delete Backup Set
  - (3). Export Backup Set Settings to XML
  - (4). Import Backup Set Settings from XML**
  - (5). Generate new Backup Set Settings Template
  - (6). Change Language [English]
  - (7). Update Profile Settings
  - (8). Quit
- 

Your Choice: 4

*Backup Set 'Daily Backup' already exist. Confirm overwrite? (Y/N) ? y  
XML imported, uploading to server...*

*XML successfully uploaded to server*

Main Menu

---

- (1). List Backup Sets
- (2). Delete Backup Set
- (3). Export Backup Set Settings to XML
- (4). Import Backup Set Settings from XML
- (5). Generate new Backup Set Settings Template
- (6). Change Language [English]
- (7). Update Profile Settings
- (8). Quit

To see if the modification of the backup set settings is successful, select option **(1)** from the main menu and select the imported XML file.

*Main Menu*

- 
- (1). List Backup Sets
  - (2). Delete Backup Set
  - (3). Export Backup Set Settings to XML
  - (4). Import Backup Set Settings from XML
  - (5). Generate new Backup Set Settings Template
  - (6). Change Language [English]
  - (7). Update Profile Settings
  - (8). Quit
- 

Your Choice: 1

Encryption Mode : CBC  
Encryption Key Length: 256

Press Enter to continue...

## 6.5 Generate new Backup Set Settings Template

This feature is used to create a new backup set. The supported backup set types are **File**, **MySQL Database**, **MariaDB**, **Oracle Database Server** and **IBM Domino**.

Select option **(5)** on the main menu then select **(1). File** to generate a File Backup Set Template to the /root/.obm/config directory.

**Note:** To see example of a **File Backup Setting**, please refer to [Appendix C Example File Backup Set Setting](#).

```
Main Menu
-----
(1). List Backup Sets
(2). Delete Backup Set
(3). Export Backup Set Settings to XML
(4). Import Backup Set Settings from XML
(5). Generate new Backup Set Settings Template
(6). Change Language [English]
(7). Update Profile Settings
(8). Quit
-----
Your Choice: 5

Choose a template from a backup set type
-----
(1). File
(2). MySQL Database
(3). MariaDB
(4). Oracle Database Server
(5). IBM Domino
-----
Your Choice: 1

XML file successfully exported to /root/.obm/config/backupSet.xml

(6). Change Language [English]  
(7). Update Profile Settings  
(8). Quit

-----  
*Your Choice: 8*

*Exit Configurator Utility*

## 7 Creating a File Backup Set using ssh

There are two ways to create a File Backup Set. One is to create it using AhsayCBS while another way is through ssh. If you prefer on creating the File backup set using AhsayCBS, refer to this document for more information: [AhsayCBS v8 User's Guide](#).

1. To create a File backup set select **(5). Generate new Backup Set Settings Template** from the menu.

```
Main Menu
-----
(1). List Backup Sets
(2). Delete Backup Set
(3). Export Backup Set Settings to XML
(4). Import Backup Set Settings from XML
(5). Generate new Backup Set Settings Template
(6). Change Language [English]
(7). Update Profile Settings
(8). Quit
-----
Your Choice: 5
```

2. Select **(1). File** to generate a File Backup Set template file to the **/root/.obm/config** directory.

```
Choose a template from a backup set type
-----
(1). File
(2). MySQL Database
(3). MariaDB
(4). Oracle Database Server
(5). IBM Domino
-----
Your Choice: 1
```

```
XML file successfully exported to
/root/.obm/config/backupSet.xml
```

```
Main Menu
-----
(1). List Backup Sets
(2). Delete Backup Set
(3). Export Backup Set Settings to XML
(4). Import Backup Set Settings from XML
(5). Generate new Backup Set Settings Template
(6). Change Language [English]
(7). Update Profile Settings
(8). Quit
-----
Your Choice:
```

3. **Configuring Backup Set Settings.**

To configure the backup set setting you need to edit the **/root/.obm/config/backupSet.xml** file using a text editor, for example vi

You can either quit the RunConfigurator.sh script or open a new ssh session to edit the backupSet.xml file.

Please refer to [Appendix A](#), [B](#), and [C](#) for details and examples on how to create a backup sets using the **backupSet.xml** file.

**Notes:**

- i. Before importing the **backupSet.xml** file please remove any unused destinations and backup schedule settings. Otherwise the following error will be displayed "**Failed to import XML file (Reason: Value of Name is empty!)**" when trying to import the **backupSet.xml** file.
- ii. Setup of the following cloud storage destinations; OneDrive, OneDrive For Business, DropBox, and Google Drive are not supported in Linux CLI environment, as these cloud storage destinations require authentication using a web browser.

**4. Importing the updated backupSet.xml file to AhsayOBM**

After you have edited the **backupSet.xml** file with your chosen backup settings you need to import the settings back to AhsayOBM so they can be uploaded to AhsayCBS backup server in order to create the backup set.

For example: to create a new file backup set called "filebackup" with encryption enabled and default encryption settings.

```
Main Menu
-----
(1). List Backup Sets
(2). Delete Backup Set
(3). Export Backup Set Settings to XML
(4). Import Backup Set Settings from XML
(5). Generate new Backup Set Settings Template
(6). Change Language [English]
(7). Update Profile Settings
(8). Quit
-----
Your Choice: 4
-----
The backup set "filebackup" is not owned by this computer, do
you want to take the ownership? (Y/N) ? Y
New backup set created.
Enable Encryption (Y/N) ? Y
Use default encryption settings (Y/N) ? Y
XML imported, uploading to server...
-----
XML successfully uploaded to server
```

**5. Verify the Backup Set Settings**

To verify the uploaded backup set settings are correct select **(1). List Backup Sets** and then select the backup you wish to verify, for example backup set name filebackup.

```
Main Menu
-----
(1). List Backup Sets
(2). Delete Backup Set
(3). Export Backup Set Settings to XML
(4). Import Backup Set Settings from XML
(5). Generate new Backup Set Settings Template
(6). Change Language [English]
```

```

(7). Update Profile Settings
(8). Quit
-----
Your Choice: 1

Select a Backup Set to show more details
-----
(1). filebackup
-----
Your Choice: 1

Name : filebackup
Owner : centos-7-1810-temp
Type : FILE
Selected Source : /backupsamples
Deselected Source : /root/.obm
Deselected Source : /temp
Destination Name : AhsayCBS, Type: OBS
Encryption Key :
qtpfh1g3uNVfoYkuZN0MpsPNf3ct3cCBgFI0CALb3LC4=
Encryption Algorithm : AES
Encryption Mode : CBC
Encryption Key Length: 256

Press Enter to continue...

```

**Congratulations! The backup set configuration is now complete!**

**Notes:**

- i. We would like to stress that it is very important to keep a separate record of your encryption key in a safe place, as you will not be able to restore your data without the correct encryption key.
- ii. If you re-install AhsayOBM or install AhsayOBM on another machine the encryption will be required for restoring data from the backup set.

## 6. Verify the Backup Schedule

To verify the scheduled backup settings are correct, check the AhsayOBM scheduler log (**debug.log**) located in **/root/.obm/log/Scheduler** folder.

```

# cat /root/.obm/log/Scheduler/debug.log
[2020/09/01 14:18:34] [info] Scheduler Version='8.3.4.42'

The AhsayOBM scheduler service connects to the AhsayCBS backup server every 5 minutes to retrieve the latest profile updates. It will display a countdown of when the scheduled backup job(s) will be kicked off.

## 8 Overview on the Backup Process

The following steps are performed during a backup job. For an overview of the detailed process for Steps 3, 5, 10, and 12, please refer to the following chapters.

- ▶ [Periodic Data Integrity Check \(PDIC\) Process \(Step 3\)](#)
- ▶ Backup Set Index Handling Process
  - ◎ [Start Backup Job \(Step 5\)](#)
  - ◎ [Completed Backup Job \(Step 12\)](#)
- ▶ [Data Validation Check Process \(Step 10\)](#)

## 8.1 Periodic Data Integrity Check (PDIC) Process

For AhsayOBM v8.3.6.0 (or above), the PDIC will run on the first backup job that falls on the corresponding day of the week from **Monday to Friday**.

To minimize the impact of the potential load of large number of PDIC jobs running at the same time on the AhsayCBS server, the schedule of a PDIC job for each backup set is automatically determined by the result of the following formula:

***PDIC schedule = %BackupSetID% modulo 5***

or

***%BackupSetID% mod 5***

The calculated **result** will map to the corresponding day of the week (i.e., from Monday to Friday).

<b>0</b>	<b>Monday</b>
<b>1</b>	<b>Tuesday</b>
<b>2</b>	<b>Wednesday</b>
<b>3</b>	<b>Thursday</b>
<b>4</b>	<b>Friday</b>

**NOTE: The PDIC schedule cannot be changed.**

**Example:**

Backup set ID: 1594627447932

*Calculation: 1594627447932 mod 5 = 2*

**2    Wednesday**

In this example:

- the PDIC will run on the first backup job that falls on Wednesday; or
- if there is no active backup job(s) running from Monday to Friday, then the PDIC will run on the next available backup job.

### NOTE

Although according to the PDIC formula for determining the schedule is ***%BackupSetID% mod 5***, this schedule only applies if the previous PDIC job was actually run more than 7 days prior.

Under certain conditions, the PDIC may not run strictly according to this formula. For example:

1. If AhsayOBM was upgraded to v8.5 (or above) from an older version v6, v7, or pre-8.3.6.0 version. In this case, the PDIC job will run on the first backup job after upgrade.
2. If backup jobs for a backup set are not run on a regular daily backup schedule (for example: on a weekly or monthly schedule), then the PDIC job will run if it detects that the previous PDIC job was run more than 7 days ago.
3. Every time a data integrity check (DIC) is run, the latest PDIC run date is reset, the next PDIC job will run after 7 days.
4. The PDIC job will not run if there are no files in both the data and retention areas. For example: a newly created backup set with no backup job history or a backup set where all the data has been deleted using the Delete Backup Data feature.
5. The PDIC job will not run on a backup set that contains any data which still in v6 format. It will only run if all v6 data format on a backup set has undergone data migration to v8 block format.

## 8.2 Backup Set Index Handling Process

To minimize the possibility of index related issues affecting backups, each time index files are downloaded from and uploaded to backup destination(s); the file size, last modified date, and checksum is verified to ensure index file integrity.

### 8.2.1 Start Backup Job

## 8.2.2 Completed Backup Job

### 8.3 Data Validation Check Process

As an additional measure to ensure that all files transferred to the backup destination(s) are received and saved correctly, both the number of 16 or 32 MB data block files and the size of each block file are checked again after the files are transferred.

## 9 Running Backup Jobs

Use the **RunBackupSet.sh** script to start a backup job manually.

```
# cd /usr/local/obm/bin
# sh RunBackupSet.sh "filebackup"
-
Using APP_HOME      : /usr/local/obm
Using SETTING_HOME  :
Using JAVA_HOME     : /usr/local/obm/jvm
Using JAVA_EXE      : /usr/local/obm/jvm/bin/java
Using JAVA_OPTS     : -Xrs -Xms128m -Xmx768m -
XX:MaxDirectMemorySize=512m -client -
Dsun.nio.PageAlignDirectMemory=true
Using JNI_PATH       : -Djava.library.path=.
Using CLASSPATH     : ../cb.jar
-

## 10 Restoring Data

1. To restore files that have been backed up from your backup destination, you need to use the Restore.sh script by using a text editor like vi to configure the restore settings like:

- Backup Set Name -> BACKUP\_SET=""
- Backup Destination -> DESTINATION=""
- Location of Restored Files -> RESTORE\_TO=""
- Files/Folders to be Restored -> RESTORE\_FROM=""
- Snapshot to be restored ->POINT\_IN\_TIME=""
- Applying the original permission to the restore files ->RESTORE\_PERMISSION=""
- Verifying in-file delta file checksum during restore ->VERIFY\_CHKSUM=""

```
# cd /usr/local/obm/bin
# vi Restore.sh

#!/bin/sh

#####
# Restore.sh
#####
# You can use this shell script to restore backup files using
# command-line.
# Just customize the "User Define Section" below with values for
# your restore
# action.

#####
## Start: User Defined Section
#####

# ----- BACKUP_SET -----
# | The name or ID of the backup set that you want to restore.
# | If backup set name is not in English, please use ID instead.
# | e.g. BACKUP_SET="1119083740107"
# | or BACKUP_SET="FileBackupSet-1"
#
# | You can leave this parameter blank if you have only 1 backup
# set.
# -----
BACKUP_SET="filebackup"

# ----- DESTINATION -----
#
# The name or ID of the backup destination that you want to
# restore from.
# If backup destination name is not in English, please use ID
# instead.
# | e.g. DESTINATION="1740107119083"
# | or DESTINATION="Destination-1"
#
# | You can leave this parameter blank if you have only 1
# destination.
```

```

# -----
# DESTINATION="AhsayCBS"

# ----- RESTORE_TO -----
# | Directory to where you want files to be restored
# | set to "" to restore files to original location
# | e.g. RESTORE_TO="/tmp"
# -----
RESTORE_TO="/restored"

# ----- RESTORE_FROM -----
# | File/Directory on the backup server that you would like to
# restore
# | e.g. RESTORE_FROM="/Data"
# -----
RESTORE_FROM="/backupsamples"

# ----- POINT_IN_TIME -----
# The point-in-time snapshot (successful backup) that you want to
# restore |
# from the backup server. Use "Current" for the latest backup
snapshot |
# e.g. POINT_IN_TIME="2006-10-04-12-57-13"
# or POINT_IN_TIME="Current"
#
# You can retrieve the point in time by using the
ListBackupJob.sh
# -----
POINT_IN_TIME="Current"

# ----- RESTORE_PERMISSION -----
# | set to "Y" if you want to restore file permissions
# | set to "N" if you do NOT want to restore file permissions
# -----
RESTORE_PERMISSION="N"

# ----- SKIP_INVALID_KEY -----
# | set to "Y" if you want to skip restore file with invalid key
# | set to "N" if you want to prompt user to input a correct key
# -----
SKIP_INVALID_KEY="N"

# ----- SYNC_OPTION -----
# | Delete extra files
# | set to "Y" if you want to enable sync option
# | set to "N" if you do NOT want to enable sync option
# | set to "" to prompt for selection
# -----
SYNC_OPTION="N"

# ----- REPLACE_EXISTING_FILE -----
# set to "--all" to replace all existing file(s) of the same
filename
# set to "--none" to skip all existing file(s) with the same
filename
# set to "" to prompt for selection
# -----
REPLACE_EXISTING_FILE="--all"

# ----- SETTING_HOME -----
# | Directory to your setting home.

```

```

# | Default to ${HOME}/.obm when not set.
# | e.g. SETTING_HOME="${HOME}/.obm"
# -----
SETTING_HOME="""

# ----- FILTER -----
# Filter out what files you want to restore
# -Pattern=xxx-Type=yyy-Target=zzz
# where xxx is the filter pattern,
# yyy is the filter type, which can be one of the following:
# [exact | exactMatchCase | contains | containsMatchCase|
#
# startWith | startWithMatchCase | endWith | endWithMatchCase]
#
# zzz is the filter target, which can be one of the following:
# [toFile | toFileDir | toDir]
#
#
# e.g. FILTER="-Pattern=.txt-Type=exact-Target=toFile"
# -----
FILTER="""

# ----- TEMP_DIR -----
# | Directory to where you want to store restore files
temporarily
# | set to "" to use the temporary directory in the backup set
# | e.g. TEMP_DIR="/tmp"
# -----
TEMP_DIR="/temp"

# ----- VERIFY_CHKSUM -----
# | set to "Y" if you want to verify in-file delta file checksum
during restore
# | set to "N" if you do NOT want to verify in-file delta file
checksum during |
# | restore
#
# -----
VERIFY_CHKSUM="N"

#####
END: User Defined Section #####

```

2. After the Restore.sh script is configured the files can be restored by running the Restore.sh script.

```

# cd /usr/local/obm/bin
# sh Restore.sh
Using APP_HOME:          : /usr/local/obm
Using BACKUP_SET:        : filebackup
Using RESTORE_FROM:      : /backupsamples
Using RESTORE_TO:         : /restored
Using POINT_IN_TIME:     : Current
Using RESTORE_PERMISSION : N
Using TEMP_DIR:           : /temp
Filter Pattern not set, filter would not apply to restore

# 11 Contact Ahsay

## 11.1 Technical Assistance

To contact Ahsay support representatives for technical assistance, visit the Partner Portal:

<https://www.ahsay.com/partners/>

Also use the Ahsay Wikipedia for resource such as Hardware Compatibility List, Software Compatibility List, and other product information:

<http://wiki.ahsay.com/>

## 11.2 Documentation

Documentations for all Ahsay products are available at:

[https://www.ahsay.com/jsp/en/downloads/ahsay-downloads\\_documentation\\_guides.jsp](https://www.ahsay.com/jsp/en/downloads/ahsay-downloads_documentation_guides.jsp)

You can send us suggestions for improvements or report on issues in the documentation by contacting us at:

<https://www.ahsay.com/partners/>

Please specify the specific document title as well as the change required/suggestion when contacting us.

# Appendix

## Appendix A      File Backup Set XML Template (Raw)

```
<?xml version="1.0" encoding="UTF-8"?>

## Appendix B      File Backup Set XML Template (with explanation)

This appendix explains all configurable items with their available options, highlighted in red, in this file backup set XML scripts.

### Backup Set Setting

The following items define the basic configurations of the file backup set.

- ➊ **Backup set type** – enter the backup set type, for instance, File, MySQL etc.
- ➋ **Backup set name** – name your backup set.
- ➌ **Temporary directory for storing backup files** – Enter the directory path where you would like to have the backup files stored temporarily. The temporary directory is used for various purposes, such as storage of temporary spooled file (for database specific backup type in AhsayOBM), remote file list, local file list, temporary delta file and other files of temporary nature.
- ➍ **Remove temporary files after backup** – choose whether to remove temporary files after you finish backup.
- ➎ **Select compression type** – choose the backup compression mode among Normal, Fast, Extreme fast, or No compression.

Compression type defines the compression method use during backup job for the corresponding backup set. The Compression Type can be changed at anytime after backup set creation.

There are four compression types available. By default, newly created backup sets are configured to use Fast Compression Type. Basically, there is a tradeoff between Compression Type and CPU usage.

- No Compression
- Normal (Compressed file size is smallest but with high CPU usage)
- Fast (Compressed file size is larger than Normal Compression but with lower CPU usage)
- Fast with optimization for local

The Compression Type selected will affect the size of the backup files, which in turn will affect the storage usage and therefore the storage cost for each backup set. The size of the compressed file will affect the overall backup performance, as backup of smaller files over the internet is going to be quicker than larger files.

For File backup set, then the compression type is automatically set to Fast with optimization for local in order to ensure optimal restore performance.

- ➏ **Backup files' permissions** – choose whether to backup operating system file permission of the data selected as backup source.
- ➐ **Follow link of the backup files** – choose whether to follow an NTFS junction point or NTFS symbolic link during backup. When the follow link option is enabled, not only is the symbolic link or junction point backed up, but directories and files that the junction point links to will also be backed up.

```

<?xml version="1.0" encoding="UTF-8"?>
<Setting>
<!-- This is the backup set setting -->
<Key name="Backup Set Setting">
<!-- Backup set type (Read Only) -->
<Value data="FILE" name="Type" type="string" />
<!-- Backup set name -->
<Value data="" name="Name" type="string" />
<!-- Temporary directory for storing backup files -->
<Value data="" name="Temporary Working Directory"
type="string" />
<!-- Remove temporary files after backup -->
<!-- Y: Yes -->
<!-- N: No -->
<Value data="Y" name="Delete temporary files after backup"
type="boolean" />
<!-- Select compression type -->
<!-- GzipDefaultCompression : Normal -->
<!-- GzipBestSpeedCompression: Fast (Compressed size larger than
normal) -->
<!-- SnappyDefaultCompression: Fast with optimization for local
-->
<!-- Leave the field blank for no compression -->
<Value data="" name="Compression Type" type="string" />
<!-- Backup files' permissions -->
<!-- Y: Yes -->
<!-- N: No -->
<Value data="Y" name="Upload files permission" type="boolean"
/>
<!-- Follow link of the backup files -->
<!-- Y: Yes -->
<!-- N: No -->
<Value data="Y" name="Follow links" type="boolean" />

```

## Selected Source

- Enter the file path where the files you would like to backup are located.

```

<!-- This includes the files you want to backup -->
<!-- Copy and paste the whole <Key> to add more selected
sources -->
<Key name="Selected Source">
    <!-- Please enter your file path, e.g. /root/Documents -->
    <Value data="" name="Path" type="string" />
</Key>

```

## Deselected Source

- Enter the file path where files you would like to exclude from the backup.

```

<!-- This excludes the files from the included source -->
<!-- Copy and paste the whole <Key> to add more deselected
sources -->
<Key name="Deselected Source">
    <!-- Please enter your file path, e.g. /root/Documents -->
    <Value data="" name="Path" type="string" />
</Key>

```

## Schedule Settings

- Choose whether you would like backup jobs to be run at the scheduled time you set.

```
<!-- Settings for your scheduled backups -->
<Key name="Schedule Settings">
    <!-- Enable scheduled backup on this computer -->
    <!-- Y: Yes -->
    <!-- N: No -->
    <Value data="N" name="Enable" type="boolean" />
```

## Daily Schedule Settings

Set backup jobs to run daily at the time you specified.

- Start hour** – the starting hour of the backup, from 0-23.
- Start minute** – the starting minute of the backup, from 0-59.
- Duration of this backup in hours** – the duration you would like this backup to perform, in hours. Set to -1 if you would like the backup job to run until it finishes.
  - Stop** – the stop **time** of the backup job. This only applies to schedules with start backup “at” and is not supported for periodic backup schedule (start backup “every”)
    - until full backup completed** – this option will stop a backup job once it is complete. This is the configured stop time of the backup job by default.
    - after (defined no. of hrs.)** – this option will stop a backup job after a certain number of hours regardless of whether the backup job has completed or not. This can range from 1 to 24 hrs.

The number of hours must be enough to complete a backup of all files in the backup set. For small files in a backup, if the number of hours is not enough to back up all files, then the outstanding files will be backed up in the next backup job. However, if the backup set contains large files, this may result in partially backed up files.

For example, if a backup has 100GB file size which will take approximately 15 hours to complete on your environment, but you set the “stop” after 10 hours, the file will be partially backed up and cannot be restored. The next backup will upload the files from scratch again.

The partially backed up data will have to be removed by running the [data integrity check](#).

As a general rule, it is recommended to review this setting regularly as the data size on the backup machine may grow over time.

- Interval** – the interval of the backup from minutes or hours.
  - minute interval**, 1, 2, 3, 4, 5, 6, 10, 12, 15, 20, or 30 minutes
  - hourly interval**, 1, 2, 3, 4, 6, 8, 10, or 12 hours

```

<!-- Daily settings -->
<!-- Copy and paste the whole <Key> to add more daily
schedules -->
<Key name="Daily Schedule Settings" allowMultiple="Y">
    <!-- Name of schedule -->
    <Value data="Daily-Schedule" name="Name" type="string" />

->
    <Value data="-1" name="Interval" type="integer" />
</Key>

```

## Weekly Schedule Settings

Set backup jobs to run weekly at the time you specified.

- ➊ **Start hour** – the starting hour of the backup, from 0-23.
- ➋ **Start minute** – the starting minute of the backup, from 0-59.
- ➌ **Duration of this backup in hours** – the duration you would like this backup to perform, in hours. Set to -1 if you would like the backup job to run until it finishes.
  - ➍ **Stop** – the stop **time** of the backup job. This only applies to schedules with start backup “at” and is not supported for periodic backup schedule (start backup “every”)
    - **until full backup completed** – this option will stop a backup job once it is complete. This is the configured stop time of the backup job by default.
    - **after (defined no. of hrs.)** – this option will stop a backup job after a certain number of hours regardless of whether the backup job has completed or not. This can range from 1 to 24 hrs.

The number of hours must be enough to complete a backup of all files in the backup set. For small files in a backup, if the number of hours is not enough to back up all files, then the outstanding files will be backed up in the next backup job. However, if the backup set contains large files, this may result in partially backed up files.

For example, if a backup has 100GB file size which will take approximately 15 hours to complete on your environment, but you set the “stop” after 10 hours, the file will be partially backed up and cannot be restored. The next backup will upload the files from scratch again.

The partially backed up data will have to be removed by running the [data integrity check](#).

As a general rule, it is recommended to review this setting regularly as the data size on the backup machine may grow over time.

- ➊ **Interval** – the interval of the backup from minutes or hours.
  - ➎ minute interval, 1, 2, 3, 4, 5, 6, 10, 12, 15, 20, or 30 minutes
  - ➏ hourly interval, 1, 2, 3, 4, 6, 8, 10, or 12 hours
- ➋ **Backup on these days of the week** – choose to enable or disable backup on each day in week.

```

<!-- Weekly settings -->
<!-- Copy and paste the whole <Key> to add more weekly
schedules -->
<Key name="Weekly Schedule Settings" allowMultiple="Y">
    <!-- Name of schedule -->
    <Value data="Weekly-Schedule" name="Name" type="string"

    <Value data="Y" name="Friday" type="boolean" />
    <Value data="Y" name="Saturday" type="boolean" />
</Key>

```

## Monthly Schedule Settings

Set backup jobs to run monthly at the time you specified.

- ➊ **Start hour** – the starting hour of the backup, from 0-23.
- ➋ **Start minute** – the starting minute of the backup, from 0-59.
- ➌ **Duration of this backup in hours** – the duration you would like this backup to perform, in hours. Set to -1 if you would like the backup job to run until it finishes.
  - ➍ **Stop** – the stop **time** of the backup job. This only applies to schedules with start backup “at” and is not supported for periodic backup schedule (start backup “every”)
    - **until full backup completed** – this option will stop a backup job once it is complete. This is the configured stop time of the backup job by default.
    - **after (defined no. of hrs.)** – this option will stop a backup job after a certain number of hours regardless of whether the backup job has completed or not. This can range from 1 to 24 hrs.

The number of hours must be enough to complete a backup of all files in the backup set. For small files in a backup, if the number of hours is not enough to back up all files, then the outstanding files will be backed up in the next backup job. However, if the backup set contains large files, this may result in partially backed up files.

For example, if a backup has 100GB file size which will take approximately 15 hours to complete on your environment, but you set the “stop” after 10 hours, the file will be partially backed up and cannot be restored. The next backup will upload the files from scratch again.

The partially backed up data will have to be removed by running the [data integrity check](#).

As a general rule, it is recommended to review this setting regularly as the data size on the backup machine may grow over time.

- ➊ **Schedule date of month** – set exact date in a month when you would like the backup to perform. Set to 0 if you would like the backup performed in a specified occurrence + criteria format, e.g. the third Wednesday in month.
- ➋ **Backup [Occurrence + Criteria] format**  
You can set the backup to perform on a specified week (**Occurrence, First / Second / Third / Last**) and on a specified day of the week (**Criteria, Sun thru Sat**), for instance, the third Wednesday in a month.
  - ➌ **Backup occurrence** – set the week, i.e., First / Second / Third / Last. If you have set an exact date in the previous “Schedule date of month” configuration, this setting will be ignored.
  - ➍ **Backup criteria** – set a day of the week, i.e., Sunday thru Saturday. If you have set an exact date in the previous “Schedule date of month” configuration, this setting will be ignored.

```

<!-- Monthly settings -->
<!-- Copy and paste the whole <Key> to add more monthly
schedules -->
<Key name="Monthly Schedule Settings">
    <!-- Name of schedule -->
    <Value data="Monthly-Schedule" name="Name"
    type="string" />

    <Value data="21" name="Hour" type="integer" />
    <!-- Start minute -->
    <!-- 0, 1, 2... 59 -->
    <Value data="0" name="Minute" type="integer" />
    <!-- Duration of this backup in hours -->
    <!-- 1, 2, 3... -->
    <!-- A value of -1 means run until job finish -->
    <Value data="-1" name="Duration" type="integer" />
    <!-- Schedule date of month -->
    <!-- 1, 2, 3... 31 -->
    <!-- 32: Last -->
    <!-- Set to 0 if you want to use the format of
    occurrence + criteria, e.g. Third Wednesday, instead --
    >
    <Value data="1" name="Schedule Date" type="integer" />
    <!-- Backup occurrence -->
    <!-- First / Second / Third / Fourth / Last -->
    <!-- If "Schedule Date" is not zero, this value will be
    ignored -->
    <Value data="First" name="Occurrence" type="string" />
    <!-- Backup criteria -->
    <!-- Sunday / Monday / Tuesday / Wednesday / Thursday /
    Friday / Saturday / Weekday / Weekend -->
    <!-- If "Schedule Date" is not zero, this value will be
    ignored -->
    <Value data="Friday" name="Criteria" type="string" />
</Key>

```

## Custom Schedule Settings

Set backup jobs to run at the date and time you specified.

- ➊ **Start hour** – the starting hour of the backup, from 0-23.
- ➋ **Start minute** – the starting minute of the backup, from 0-59.
- ➌ **Duration of this backup in hours** – the duration you would like this backup to perform, in hours. Set to -1 if you would like the backup job to run until it finishes.
  - ➍ **Stop** – the stop **time** of the backup job. This only applies to schedules with start backup “at” and is not supported for periodic backup schedule (start backup “every”)
    - **until full backup completed** – this option will stop a backup job once it is complete. This is the configured stop time of the backup job by default.
    - **after (defined no. of hrs.)** – this option will stop a backup job after a certain number of hours regardless of whether the backup job has completed or not. This can range from 1 to 24 hrs.

The number of hours must be enough to complete a backup of all files in the backup set. For small files in a backup, if the number of hours is not enough to back up all files, then the outstanding files will be backed up in the next backup job. However, if the backup set contains large files, this may result in partially backed up files.

For example, if a backup has 100GB file size which will take approximately 15 hours to complete on your environment, but you set the “stop” after 10 hours, the file will be partially backed up and cannot be restored. The next backup will upload the files from scratch again.

The partially backed up data will have to be removed by running the [data integrity check](#).

As a general rule, it is recommended to review this setting regularly as the data size on the backup machine may grow over time.

- ➎ **Date for performing custom schedule backup** - enter a specific date when you would like the backup to perform. The date format should be in YYYY-MM-DD.

```

<!-- Custom settings -->
<!-- Copy and paste the whole <Key> to add more custom
schedules -->
<Key name="Custom Schedule Settings">
    <!-- Name of schedule -->
    <Value data="Custom" name="Name" type="string" />
    <!-- Start hour -->
    <!-- 0, 1, 2... 23 -->
    <Value data="21" name="Hour" type="integer" />
    <!-- Start minute -->
    <!-- 0, 1, 2... 59 -->
    <Value data="0" name="Minute" type="integer" />
    <!-- Duration of this backup in hours -->
    <!-- 1, 2, 3... -->
    <!-- A value of -1 means run until job finish -->
    <Value data="-1" name="Duration" type="integer" />
    <!-- Date for performing custom schedule backup -->
    <!-- Input in the format of YYYY-MM-DD -->
    <Value data="2016-4-30" name="Schedule Date"
        type="string" />
</Key>
</Key>

```

## Destination Settings

- ➊ **Concurrency level** – set the number of destinations to run backup job concurrently
- ➋ **AhsayCBS Destination Settings** – this option allows backup files to be stored on the server
- ➌ **Local Destination Settings** – this option allows backup files to be stored in your local computer. Enter the directory path where you would like the backup files to be stored.

```

<!-- This is the collection of destinations -->
<Key name="Destination Settings">
    <!-- Concurrency level is the number of destinations to run
    backup concurrently -->
    <!-- 2, 3, 4... -->
    <!-- 1 : Backup to destinations one by one sequentially -->
    <!-- -1: Backup to all destinations concurrently -->
    <Value data="1" name="Concurrency Level" type="integer" />
    <!-- AhsayCBS destination is where the files are backup to
    server -->
    <Key name="AhsayCBS Destination Settings">
    </Key>
    <!-- Local destination means backup files are stored in
    your computer -->
    <!-- Copy and paste the whole <Key> to add more local
    destinations -->
    <Key name="Local Destination Settings">
        <!-- Name of your destination -->

type="boolean" />
</Key>
</Key>
```

## In-file delta setting

In-File delta technology is an advanced data block matching algorithm with the intelligence to pick up changes (delta) of file content between two files. You can choose between **Differential** and **Incremental** in this setting.

- ➊ **Differential** - The delta is generated by comparing with the last uploaded full file only. Delta generated with this method will grow daily and uses more bandwidth. However, for restoration, the full file and a single delta is required to be restored and merged.
- ➋ **Incremental** - The delta is generated by comparing with the last uploaded full or delta file. Delta generated with this method is smaller and uses the least bandwidth. However, for restoration, the full file and all deltas chain up to the required point-in-time are required to be restored and merged. This is prone to data lost (e.g. broken delta chain).

```
<!-- This shows the in-file delta setting -->
<Key name="In-file Delta Setting">
    <!-- Enable in-file delta backup -->
    <!-- Y: Yes -->
    <!-- N: No -->
    <Value data="Y" name="Enable" type="boolean" />
    <!-- Default in-file delta type -->
    <!-- D: Differential -->
    <!-- I: Incremental -->
    <Value data="" name="Default Delta Type" type="string" />
</Key>
</Key>
</Setting>
```

## Appendix C Example File Backup Set Setting

Below are the configuration parameters of the file backup set sample.

<b>Backup Set Name</b>	b4
<b>Temporary Working Directory</b>	/tmp
<b>Remove temporary files after backup</b>	Yes
<b>Compress Type</b>	Fast
<b>Backup file permissions</b>	Yes
<b>Follow Sym link</b>	Yes
<b>Daily schedule</b>	Runs every 8 hours
<b>Destination</b>	CBS
<b>Backup Source</b>	/Templates
<b>Exclude</b>	/root/.obm, /usr/local/obm, /tmp

\*Configurable items are highlighted in red.

```
<?xml version="1.0" encoding="UTF-8"?>

## Appendix D      Uninstall AhsayOBM (SH online installer)

To uninstall AhsayOBM installed using SH online installer, use the **uninstall.sh** script, then run the **rm** command to remove the remaining AhsayOBM files from the Linux machine.

```
# cd /usr/local/obm/bin
# sh uninstall.sh

## **Appendix G      Handling of Non-regular Files**

The following non-regular files/folders such as device files, block files, virtual files systems, pseudo file systems etc will be automatically ignored if selected for backup. Backup log entries of these files/folders will not appear in the backup logs.

**Example:**

/proc  
/dev  
/sys  
/run

For AhsayOBM installations on Linux GUI, these devices will not be shown on the backup source screen.

## Appendix H How to Create a File Backup Set in Predefined Destination

File backup set in predefined destination can only be created by the user once the service provider has set up the predefined destination beforehand. This can be created through AhsayCBS and ssh.

### Using AhsayCBS

Follow the steps in [Chapter 5.1](#) from 1 – 6.

In Step 7, add the predefined destination. Click [+] to add the predefined destination.

Destination

Backup Mode  
Sequential ▾

+ ⚡

Name

← → ✕ ?

Check the box of the predefined destination and click the Add button.

Add Destination

<input type="checkbox"/>	Name
<input type="checkbox"/>	AhsayCBS
<input checked="" type="checkbox"/>	GoogleDrive-1

+ ✕ ?

Continue with steps 8 – 10.

Once the backup set is saved you can check it in AhsayOBM by selecting to List Backup Sets.

```
Main Menu
-----
(1). List Backup Sets
(2). Delete Backup Set
(3). Export Backup Set Settings to XML
(4). Import Backup Set Settings from XML
(5). Generate new Backup Set Settings Template
(6). Change Language [English]
(7). Update Profile Settings
(8). Quit
-----
Your Choice: 1

Select a Backup Set to show more details
-----
(1). predefined
-----
Your Choice: 1

Name          : predefined
Owner         : centos7
Type          : FILE
Selected Source: /root/Documents
Deselected Source: /root/.obm
Deselected Source: /usr/local/obm
Deselected Source: /root/tmp
Destination Name: GoogleDrive-1, Type: GDrive
Encryption Key: abc123$%
Encryption Algorithm: AES
Encryption Mode: CBC
Encryption Key Length: 256

Press Enter to continue...
```

## Using ssh

Please refer to the steps in [Chapter 5.2](#) on how to create a backup set using ssh.

## Appendix I     How to Change Ownership of Backup Set

Backup sets may be transferred from one computer to another by a simple export and import of the BackupSet.xml file provided that the following requirements are met:

1. AhsayOBM version must be the same or a newer version.
2. Both computers are on similar operating system platforms (i.e. both on Linux)

An example of this is backup set “b1” was originally created on a Linux machine “centos7” is transferred to another Linux machine “centos65”. In order to do this, follow the instructions below to change ownership of a backup set:

1. Login to the AhsayOBM Linux machine where you intend to transfer the ownership of the backup set to using root.

```
login as: root  
root@10.90.30.2's password:  
Last login: Wed Jul 31 09:43:09 2019 from 192.168.12.1  
[root@centos65 ~]#
```

2. Change directory by using the command **cd /usr/local/obm/bin**. Then run “**sh RunConfigurator.sh**”. Login by selecting **(1). Login**.

```
[root@centos65 bin]# cd /usr/local/obm/bin  
[root@centos65 bin]# sh RunConfigurator.sh  
Startup Ahsay Online Backup Manager ...  
Config file found
```

```
Login Menu  
-----  
(1). Login  
(2). Change Network Settings  
(3). Forgot Password  
(4). Quit  
-----  
Your Choice: 1
```

3. Enter your Login Name and Password.

```
Login Name : LinuxTest  
Password : *****
```

```
Please wait while verifying user account with server...  
log4j:WARN No appenders could be found for logger  
(org.apache.http.impl.conn.PoolingClientConnectionManager).  
log4j:WARN Please initialize the log4j system properly.  
log4j:WARN See http://logging.apache.org/log4j/1.2/faq.html#noconfig for more info.  
Your profile has been downloaded and updated.
```

```
Main Menu  
-----  
(1). List Backup Sets  
(2). Delete Backup Set  
(3). Export Backup Set Settings to XML  
(4). Import Backup Set Settings from XML
```

(5). Generate new Backup Set Settings Template  
(6). Change Language [English]  
(7). Update Profile Settings  
(8). Quit

-----

Your Choice:

4. Select **(3). Export Backup Set Settings to XML**, to export backup set setting to xml. Choose the backup set to be exported. Enter **y** to enter the encryption key. Enter your encryption key twice to export the backup set settings.

Choose your backup set to generate XML file

-----

(1). b1

-----

Your Choice: 1

Update encryption key for backup set "b1"

Do you want to enter the encryption key for this backup set? (Y/N) ? y

Enter encryption key : \*\*\*\*\*

Re-enter encryption key : \*\*\*\*\*

XML file successfully exported to /root/.obm/config/backupSet.xml

**Note:** The step to enter the encryption key will only be displayed if the backup set have an encryption key defined.

5. Modify **/root/.obm/config/backupSet.xml** in a text editor like vi. Change the Value data under **“Schedule Settings”** and save. If Value data is “Y” change it to “N”, if “N” then change to “Y”.

```
<Key name="Schedule Settings">
    <!-- Enable scheduled backup on this computer -->
    <!-- Y: Yes -->
    <!-- N: No -->
    <Value data="Y" name="Enable" type="boolean" />
```

6. Select **(4). Import Backup Set Settings from XML**, to import backup set settings from xml.

Main Menu

-----

(1). List Backup Sets  
(2). Delete Backup Set  
(3). Export Backup Set Settings to XML  
(4). Import Backup Set Settings from XML  
(5). Generate new Backup Set Settings Template  
(6). Change Language [English]  
(7). Update Profile Settings  
(8). Quit

-----

Your Choice: 4

7. In the prompt, enter **y** to take ownership of the backup set. Also confirm overwrite by entering **y**. Then list backup set by selecting **(1). List Backup Sets** to verify that the ownership of the backup set has been changed to the new owner.

```

The backup set "b1" is owned by "centos7", do you want to take the ownership?
(Y/N) ? y
Backup Set 'b1' already exist. Confirm overwrite? (Y/N) ? y
XML imported, uploading to server...

XML successfully uploaded to server

Main Menu
-----
(1). List Backup Sets
(2). Delete Backup Set
(3). Export Backup Set Settings to XML
(4). Import Backup Set Settings from XML
(5). Generate new Backup Set Settings Template
(6). Change Language [English]
(7). Update Profile Settings
(8). Quit
-----
Your Choice: 1

Select a Backup Set to show more details
-----
(1). b1
-----
Your Choice: 1

Name      : b1
Owner     : Centos65
Type      : FILE
Selected Source   : /root/Documents
Encryption Key   : abc123$%
Encryption Algorithm : AES
Encryption Mode    : CBC
Encryption Key Length: 256

Press Enter to continue...

```

8. Modify **/root/.obm/config/backupSet.xml** and change the value data of “**Schedule Settings**” back to its original value and save. If Value data is “N” change it to “Y”, if “Y” then change to “N”.

```

<Key name="Schedule Settings">
  <!-- Enable scheduled backup on this computer -->
  <!-- Y: Yes -->
  <!-- N: No -->
  <Value data="N" name="Enable" type="boolean" />

```

9. Import the BackupSet.xml again for the scheduled backup to take effect. Since in the example the scheduled backup was disabled before changing the ownership, so afterwards the scheduled backup must be enabled again for it to run on schedule. Select **(4). Import Backup Set Settings from XML**, then **y** to confirm overwrite.

*Main Menu*

- (1). List Backup Sets  
(2). Delete Backup Set  
(3). Export Backup Set Settings to XML  
**(4). Import Backup Set Settings from XML**  
(5). Generate new Backup Set Settings Template

*XML successfully uploaded to server*

## Appendix J      Script Files

### RunConfigurator.sh

This script file is used to run AhsayOBM. To configure the parameters, open the script file in a text editor like vi.

```
# vi RunConfigurator.sh
```

Configure the following parameters:

- ➊ **SETTING\_HOME** – this is the directory to your setting home. If not set, the default directory is “\${HOME}/.obm”.  
e.g. SETTING\_HOME="/root/.obm"
- ➋ **DEBUG\_MODE** – this parameter is used to enable or disable the debug mode when opening AhsayOBM.  
e.g. DEBUG\_MODE="- -debug" or DEBUG\_MODE=""

```
# vi RunConfigurator.sh

#!/bin/sh

#####
##### RunConfigurator.sh

```

Once you have configured the parameters, save the changes. Use the **sh** command to run the script. The list of backup sets will be displayed.

```
# sh ListBackupSet.sh
Using APP_HOME      : /usr/local/obm
Using SETTING_HOME :
BackupSet Name= b1, ID= 1563501422700
```

## ListBackupJob.sh

This script file is used to display the list of backup jobs under a specific backup set. To configure the parameters, open the script file in a text editor like vi.

```
# vi ListBackupJob.sh
```

Configure the following parameters:

- ▶ **SETTING\_HOME** – this is the directory to your setting home. If not set, the default directory is "\${HOME}/.obm".  
e.g. `SETTING_HOME="/root/.obm"`
  - ▶ **BACKUP\_SET** – this is the name of the backup set which contains the backup job that you want to list. There are two (2) ways to specify the backup set: by using the *backup*

*set name* or by *backup set ID*. If the backup set name is not in English, use the backup set ID. You can leave this blank if you only have one (1) backup set.

e.g. BACKUP\_SET="1119083740107" or BACKUP\_SET="FileBackupSet-1"

- ➊ **BACKUP\_DEST** – this is the name of the destination of the backup set. There are two (2) ways to specify the destination; by using the *destination name* or *destination ID*. If the destination name is not in English, use the DestinationID. You can leave this blank if you only have one (1) backup destination.

e.g. BACKUP\_DEST="1119083740107" or BACKUP\_DEST="CBS"

```
# vi ListBackupJob.sh

#!/bin/sh

#####
##### REST AND EXIT #####
#
cd "${EXE_DIR}"
exit 0

```

Once you have configured the parameters, save the changes. Use the **sh** command to run the script. The list of backup jobs of a specific backup set will be displayed.

```

# sh ListBackupJob.sh
Using APP_HOME      : /usr/local/obm
Using SETTING_HOME  :
Using BACKUP_SET    : b1
b1 [1563501422700]
2019-07-19-12-01-07

```

## RunBackupSet.sh

This script file is used to manually run a backup. To configure the parameters, open the script file in a text editor like vi.

```
# vi RunBackupSet.sh
```

Configure the following parameters:

- ➊ **BACKUP\_SET** – this is the name of the backup set which you want to backup. There are two (2) ways to specify the backup set; by using the *backup set name* or by *backup set ID*. If the backup set name is not in English, use the backup set ID. You can leave this blank if you only have one (1) backup set.

e.g. BACKUP\_SET="1119083740107" or BACKUP\_SET="FileBackupSet-1"
- ➋ **BACKUP\_DESTS** – this is the name of the destination where you want your backup to be stored. There are two (2) ways to specify the destination; by using the *destination name* or *destination ID*. If the destination name is not in English, use the DestinationID. You can leave this blank if you only have one (1) backup destination.

e.g. BACKUP\_DESTS="1119083740107" or BACKUP\_DEST="CBS"
- ➌ **BACKUP\_TYPE** – this is the backup set type. You do not need to change this if you are backing up a file backup set. There are four (4) options available for this: *FILE*, *DATABASE*, *DIFFERENTIAL* and *LOG*.

e.g. BACKUP\_TYPE="FILE" for file backup  
BACKUP\_TYPE="DATABASE" for full database backup  
BACKUP\_TYPE="DIFFERENTIAL" for differential database backup  
BACKUP\_TYPE="LOG" for log database backup
- ➍ **SETTING\_HOME** – this is the directory to your setting home. If not set, the default directory is "\${HOME}/.obm".

e.g. SETTING\_HOME="/root/.obm"
- ➎ **DELTA\_MODE** – this is the In-File Delta setting. There are three (3) options available for this: *Incremental*, *Differential* and *Full*.

e.g. DELTA\_MODE="I" for Incremental In-file delta backup  
DELTA\_MODE="D" for Differential In-file delta backup  
DELTA\_MODE="F" for full file backup  
DELTA\_MODE="" for using backup set in-file delta setting
- ➏ **CLEANUP\_MODE** – this is used to remove obsolete files from your backup destination after a backup has been run. There are two (2) options available for this: *ENABLE-CLEANUP* and *DISABLE-CLEANUP*.

e.g. CLEANUP\_MODE="ENABLE-CLEANUP" or CLEANUP\_MODE="DISABLE-CLEANUP"
- ➐ **DEBUG\_MODE** – this is used to enable or disable debug for a backup job. There are two (2) options available for this: *ENABLE-DEBUG* and *DISABLE-DEBUG*.

e.g. DEBUG\_MODE="ENABLE-DEBUG" or DEBUG\_MODE="DISABLE-DEBUG"

```
# vi RunBackupSet.sh

#!/bin/sh

#####
# You can use this shell script to run any of your backup sets from the
# command line. Just customize the "User Defined Section" below with your
# values for your backup action.
#
#####
##### START: User Defined Section #####
#####

# ----- BACKUP_SET -----
#
# | The name or ID of the backup set that you want to run
#
# | If backup set name is not in English, please use ID instead.
# | e.g. BACKUP_SET="1119083740107"
#
# | or BACKUP_SET="FileBackupSet-1"
#
# |
#
# | You can leave this parameter blank if you have only 1 backup set.
# |
# -----
BACKUP_SET=""

# ----- BACKUP_DESTS -----
#
# | The list of name or ID of the backup destinations that you want to run.
# | If backup destination name is not in English, please use ID instead.
# | e.g. BACKUP_DESTS="1740107119083"
#
# | or BACKUP_DESTS="Destination-1,Destination-2"
#
# | or BACKUP_DESTS="ALL"
#
# |
#
# | You can specify multiple destinations in comma-separated format,
# | or use "ALL" to run backup for all destinations.
# |
# -----
BACKUP_DESTS="ALL"
```

```

# ----- BACKUP_TYPE -----
-----
# | Set backup type. You don't need to change this if you are
backing up a |
# | file backup set.
|
# | Options available: FILE/DATABASE/DIFFERENTIAL/LOG
|
# | e.g. BACKUP_TYPE="FILE"           for file backup
|
# | or BACKUP_TYPE="DATABASE"        for Full database backup
|
# | or BACKUP_TYPE="DIFFERENTIAL"    for Differential
database backup |
# | or BACKUP_TYPE="LOG"            for Log database backup
|
# -----
-----
BACKUP_TYPE="FILE"

# ----- SETTING_HOME -----
-----
# | Directory to your setting home.
|
# | Default to ${HOME}/.obm when not set.
|
# | e.g. SETTING_HOME="${HOME}/.obm"
|
# -----
-----
SETTING_HOME=""

# ----- DELTA_MODE -----
-----
# | Set In-File Delta mode.
|
# | Options available: Incremental/Differential/Full (I/D/F)
|
# | e.g. DELTA_MODE="I"   for Incremental In-file delta
backup |
# | or DELTA_MODE="D"   for Differential In-file delta
backup |
# | or DELTA_MODE="F"   for Full File backup
|
# | or DELTA_MODE=""    for using backup set in-file delta
setting |
# -----
-----
DELTA_MODE=""

# ----- CLEANUP_MODE -----
-----
# | You can enable Cleanup mode to remove obsolete files from
your backup   |
# | destinations after backup.
|
# | Options available: ENABLE-CLEANUP/DISABLE-CLEANUP
|
# | e.g. CLEANUP_MODE="ENABLE-CLEANUP"
|

```

```

# | or CLEANUP_MODE="DISABLE-CLEANUP"
|
# -----
-----
CLEANUP_MODE="DISABLE-CLEANUP"

# ----- DEBUG_MODE -----
-----
# | Set Debug mode.
|
# | Options available: ENABLE-DEBUG/DISABLE-DEBUG
|
# | e.g. DEBUG_MODE="ENABLE-DEBUG"
|
# | or DEBUG_MODE="DISABLE-DEBUG"
|
# -----
-----
DEBUG_MODE="DISABLE-DEBUG"

## Restore.sh

This script file is used to restore backup files to its original or alternate location. To configure the parameters, open the script file in a text editor like vi.

```
# vi Restore.sh
```

Configure the following parameters:

- ➊ **BACKUP\_SET** – this is the name of the backup set which you want to restore. There are two (2) ways to specify the backup set; by using the *backup set name* or by *backup set ID*. If the backup set name is not in English, use the backup set ID. You can leave this blank if you only have one (1) backup set.  
e.g. BACKUP\_SET="1119083740107" or BACKUP\_SET="FileBackupSet-1"
- ➋ **DESTINATION** – this is the name of the destination where the backup set was stored. There are two (2) ways to specify the destination; by using the *destination name* or *destination ID*. If the destination name is not in English, use the DestinationID. You can leave this blank if you only have one (1) backup destination.  
e.g. DESTINATION="1119083740107" or DESTINATION="CBS"
- ➌ **RESTORE\_TO** – this is the directory where you want to restore the backup file. You do not need to change this if you want the backup file to be restored to its original location.  
e.g. RESTORE\_TO="" or RESTORE\_TO="/tmp"
- ➍ **RESTORE\_FROM** – this is the file or directory that you would like to restore.  
e.g. RESTORE\_FROM="/Data"
- ➎ **POINT\_IN\_TIME** – this is the specific successful backup that you want to restore. You can use *Current* if you want to use the latest backup snapshot. You can see the point in time snapshot by using the *ListBackupJob.sh* script file.  
e.g. POINT\_IN\_TIME="Current" or POINT\_IN\_TIME="2006-10-04-12-57-13"
- ➏ **RESTORE\_PERMISSION** – you can set the file permission here.  
e.g. RESTORE\_PERMISSION="N" or RESTORE\_PERMISSION="Y"
- ➐ **SKIP\_INVALID\_KEY** – you can set here if you want to skip restoring the backup file with an invalid key. There are two (2) options for this: *Y* or *N*.  
e.g. SKIP\_INVALID\_KEY="N"
- ➑ **SYNC\_OPTION** – this is the sync options if you want to delete extra files.  
e.g. SYNC\_OPTIONS="Y" if you want to enable sync options  
      SYNC\_OPTIONS="N" if you do not want to enable sync options  
      SYNC\_OPTIONS="" if you want to prompt for selection
- ➒ **REPLACE\_EXISTING\_FILE** – you can set here if you want files with the same filename to be replaced. There are three (3) options for this: *--all*, *--none* or blank.  
e.g. REPLACE\_EXISTING\_FILE="--all" if you want to replace existing files with the same filename

`REPLACE_EXISTING_FILE="none"` if you want to keep all existing files with the same filename

`REPLACE_EXISTING_FILE=""` if you want to be prompted for selection

- ➊ **SETTING\_HOME** – this is the directory to your setting home. If not set, the default directory is `"${HOME}/.obm"`.  
e.g. `SETTING_HOME="/root/.obm"`
- ➋ **FILTER** – you can filter the files that you want to be restored. You can use this format to set the filter `-Pattern=xxx-Type=yyy-Target=zzz`.  
`xxx` is the filter pattern  
`yyy` is the filter type, you have eight (8) options available for this: `exact`, `exactMatchCase`, `contains`, `containsMatchCase`, `startWith`, `startWithMatchCase`, `endWith` and `endWithMatchCase`.  
`zzz` is the filter target, you have three (3) options available for this: `toFile`, `toFileDir` and `toDir`.  
e.g. `FILTER="-Pattern=.txt-Type=exact-Target=toFile"`
- ➌ **TEMP\_DIR** – this is the directory where the restore files will be stored temporarily. If set to `""` the temporary directory in the backup set will be used.  
e.g. `TEMP_DIR="/tmp"`
- ➍ **VERIFY\_CHKSUM** – you can set here if you want the in-file delta file checksum to be verified during restore. There are two (2) options available for this: `Y` or `N`.  
e.g. `VERIFY_CHKSUM="N"` or `VERIFY_CHKSUM="Y"`

```
# vi Restore.sh

#!/bin/sh

#####
# You can use this shell script to restore backup files using command-line.
# Just customize the "User Define Section" below with values for your restore
# action.
#
#####
##### Start: User Defined Section #####
#####

# ----- BACKUP_SET -----
#
# | The name or ID of the backup set that you want to restore.
# | If backup set name is not in English, please use ID instead.
# | e.g. BACKUP_SET="1119083740107"
|
```

```

# | or BACKUP_SET="FileBackupSet-1"
|
#
|
# | You can leave this parameter blank if you have only 1
backup set. |
# -----
-----
BACKUP_SET=""

# ----- DESTINATION -----
#
# | The name or ID of the backup destination that you want to
restore from. |
# | If backup destination name is not in English, please use
ID instead. |
# | e.g. DESTINATION="1740107119083"
|
# | or DESTINATION="Destination-1"
|
#
|
# | You can leave this parameter blank if you have only 1
destination. |
# -----
-----
DESTINATION=""

# ----- RESTORE_TO -----
#
# | Directory to where you want files to be restored
|
# | set to "" to restore files to original location
|
# | e.g. RESTORE_TO="/tmp"
|
# -----
-----
RESTORE_TO=""

# ----- RESTORE_FROM -----
#
# | File/Directory on the backup server that you would like
to restore |
# | e.g. RESTORE_FROM="/Data"
|
# -----
-----
RESTORE_FROM=""

# ----- POINT_IN_TIME -----
#
# | The point-in-time snapshot (successful backup) that you
want to restore |
# | from the backup server. Use "Current" for the latest
backup snapshot |
# | e.g. POINT_IN_TIME="2006-10-04-12-57-13"
|
# | or POINT_IN_TIME="Current"
|

```

```

# |
|
# | You can retrieve the point in time by using the
ListBackupJob.sh           |
# -----
-----  

POINT_IN_TIME="Current"

# ----- RESTORE_PERMISSION -----
-----  

# | set to "Y" if you want to restore file permissions
|  

# | set to "N" if you do NOT want to restore file permissions
|  

# -----
-----  

RESTORE_PERMISSION="N"

# ----- SKIP_INVALID_KEY -----
-----  

# | set to "Y" if you want to skip restore file with invalid
key          |
# | set to "N" if you want to prompt user to input a correct
key          |
# -----
-----  

SKIP_INVALID_KEY="N"

# ----- SYNC_OPTION -----
-----  

# | Delete extra files
|  

# | set to "Y" if you want to enable sync option
|  

# | set to "N" if you do NOT want to enable sync option
|  

# | set to "" to prompt for selection
|  

# -----
-----  

SYNC_OPTION="N"

# ----- REPLACE_EXISTING_FILE -----
-----  

# | set to "--all" to replace all existing file(s) of the
same filename      |
# | set to "--none" to skip all existing file(s) with the
same filename      |
# | set to "" to prompt for selection
|  

# -----
-----  

REPLACE_EXISTING_FILE="--all"

# ----- SETTING_HOME -----
-----  

# | Directory to your setting home.
|  

# | Default to ${HOME}/.obm when not set.
|

```

```

# | e.g. SETTING_HOME="${HOME}/.obm"
|
# -----
-----
SETTING_HOME=""

# ----- FILTER -----
-----

# | Filter out what files you want to restore
|
# | -Pattern=xxx-Type=yyy-Target=zzz
|
# | where xxx is the filter pattern,
|
# |         yyy is the filter type, which can be one of the
# | following:           |
# |         [exact | exactMatchCase | contains |
containsMatchCase]           |
# |         startWith | startWithMatchCase | endWith |
endWithMatchCase]           |
# |         zzz is the filter target, which can be one of the
# | following:           |
# |         [toFile | toFileDir | toDir]
|
# |
|
# | e.g. FILTER="-Pattern=.txt-Type=exact-Target=toFile"
|
# -----

FILTER=""

# ----- TEMP_DIR -----
-----

# | Directory to where you want to store restore files
temporarily           |
# | set to "" to use the temporary directory in the backup
set           |
# | e.g. TEMP_DIR="/tmp"
|
# -----

TEMP_DIR=""

# ----- VERIFY_CHKSUM -----
-----

# | set to "Y" if you want to verify in-file delta file
checksum during restore|
# | set to "N" if you do NOT want to verify in-file delta
file checksum during |
# | restore
|
# -----

VERIFY_CHKSUM="N"

## Decrypt.sh

This script file is used to decrypt backup files. To configure the parameters, open the script file in a text editor like vi.

```
# vi Decrypt.sh
```

Configure the following parameters:

- ➊ **SOURCE\_DIR** – this is the path of the folder that contains the backup files that you want to decrypt.  
e.g. SOURCE\_DIR="/usr/local/cbs/user/LinuxTest/1563436721634/blocks"
- ➋ **ENCRYPT\_KEY** – this is the encryption key the backup set. You can leave this blank if your backup set is not encrypted.  
e.g. ENCRYPT\_KEY="RU5DUIIQVF9LRVk="
- ➌ **DECRYPT\_TO** – this is the directory where you want to store the decrypted backup file.  
e.g. DECRYPT\_TO="/tmp"
- ➍ **DECRYPT\_FROM** – this is the file or directory that you would like to decrypt.  
e.g. RESTORE\_FROM="/Data"
- ➎ **POINT\_IN\_TIME** – this is the specific successful backup that you want to decrypt. You can use *Current* if you want to use the latest backup snapshot. You can see the point in time snapshot by using the *ListBackupJob.sh* script file.  
e.g. POINT\_IN\_TIME="Current" or POINT\_IN\_TIME="2006-10-04-12-57-13"
- ➏ **RESTORE\_PERMISSION** – you can set the file permission here.  
e.g. RESTORE\_PERMISSION="N" or RESTORE\_PERMISSION="Y"
- ➐ **SKIP\_INVALID\_KEY** – you can set here if you want to skip decrypting the backup file with an invalid key. There are two (2) options for this: *Y* or *N*.  
e.g. SKIP\_INVALID\_KEY="N"
- ➑ **SYNC\_OPTION** – this is the sync options if you want to delete extra files.  
e.g. SYNC\_OPTIONS="Y" if you want to enable sync options  
      SYNC\_OPTIONS="N" if you do not want to enable sync options  
      SYNC\_OPTIONS="" if you want to prompt for selection

- **REPLACE\_EXISTING\_FILE** – you can set here if you want files with the same filename to be replaced. There are three (3) options for this: `--all`, `--none` or blank.

e.g. `REPLACE_EXISTING_FILE="--all"` if you want to replace existing files with the same filename

`REPLACE_EXISTING_FILE="--none"` if you want to keep all existing files with the same filename

`REPLACE_EXISTING_FILE=""` if you want to be prompted for selection

- **SETTING\_HOME** – this is the directory to your setting home. If not set, the default directory is `"${HOME}/.obm"`.

e.g. `SETTING_HOME="/root/.obm"`

- **FILTER** – you can filter the files that you want to be restored. You can use this format to set the filter `-Pattern=xxx-Type=yyy-Target=zzz`.

`xxx` is the filter pattern

`yyy` is the filter type, you have eight (8) options available for this: `exact`, `exactMatchCase`, `contains`, `containsMatchCase`, `startWith`, `startWithMatchCase`, `endWith` and `endWithMatchCase`.

`zzz` is the filter target, you have three (3) options available for this: `toFile`, `toFileDir` and `toDir`.

e.g. `FILTER="-Pattern=.txt-Type=exact-Target=toFile"`

- **TEMP\_DIR** – this is the directory where the restore files will be stored temporarily. If set to `"` the temporary directory in the backup set will be used.

e.g. `TEMP_DIR="/tmp"`

- **VERIFY\_CHKSUM** – you can set here if you want the in-file delta file checksum to be verified during restore. There are two (2) options available for this: `Y` or `N`.

e.g. `VERIFY_CHKSUM="N"` or `VERIFY_CHKSUM="Y"`

```
# vi Decrypt.sh
#!/bin/sh
#####
# You can use this shell script to decrypt backup files using command-line.
# Just customize the "User Define Section" below with values for your decrypt
# action.
#
#####
##### Start: User Defined Section #####
#####
# ----- SOURCE_DIR -----
#
# | The path to the [<backup set ID>/blocks] folder which contains |
|
```

```

# | the backup files that you want to decrypt.
|
# | This folder should located under backup destination
physically. |
# | e.g. SET
SOURCE_DIR="/Users/john/backupdata/1498444438340/blocks"
|
# | where directory "/Users/john/backupdata" is path of
local destination |
# -----
-----
SOURCE_DIR=""

# ----- ENCRYPT_KEY -----
#
# | The encrypting key of the backup data.
|
# | e.g. SET ENCRYPT_KEY="RU5DU11QVF9LRVk="
|
# |
|
# | You can leave this parameter blank if backup data is not
encrypted. |
# -----
-----
ENCRYPT_KEY=""

# ----- DECRYPT_TO -----
#
# | Directory to where you want files to be decrypted
|
# | e.g. DECRYPT_TO="/tmp"
|
# -----
-----
DECRYPT_TO=""

# ----- DECRYPT_FROM -----
#
# | File/Directory on the backup data that you would like to
decrypt |
# | e.g. DECRYPT_FROM="/Data"
|
# -----
-----
DECRYPT_FROM=""

# ----- POINT_IN_TIME -----
#
# | The point-in-time snapshot (successful backup) that you
want to decrypt |
# | from the backup data. Use "Current" for the latest backup
snapshot |
# | e.g. POINT_IN_TIME="2006-10-04-12-57-13"
|
# | or POINT_IN_TIME="Current"
|
# |
|
# | You can retrieve the point in time by using the
ListBackupJob.sh |

```

```

# -----
-----  

POINT_IN_TIME="Current"  

# ----- RESTORE_PERMISSION -----  

-----  

# | set to "Y" if you want to restore file permissions  

|  

# | set to "N" if you do NOT want to restore file permissions  

|  

# -----  

-----  

RESTORE_PERMISSION="N"  

# ----- SKIP_INVALID_KEY -----  

-----  

# | set to "Y" if you want to skip decrypt file with invalid  

key  

# | set to "N" if you want to prompt to input a correct key  

|  

# -----  

-----  

SKIP_INVALID_KEY="N"  

# ----- SYNC_OPTION -----  

-----  

# | Delete extra files  

|  

# | set to "Y" if you want to enable sync option  

|  

# | set to "N" if you do NOT want to enable sync option  

|  

# | set to "" to prompt for selection  

|  

# -----  

-----  

SYNC_OPTION="N"  

# ----- REPLACE_EXISTING_FILE -----  

-----  

# | set to "--all" to replace all existing file(s) of the  

same filename  

# | set to "--none" to skip all existing file(s) with the  

same filename  

# | set to "" to prompt for selection  

|  

# -----  

-----  

REPLACE_EXISTING_FILE="--all"  

# ----- SETTING_HOME -----  

-----  

# | Directory to your setting home. Log files will be located  

inside.  

# | Default to ${HOME}/.obm when not set.  

|  

# | e.g. SETTING_HOME="/Users/john/.obm"  

|  

# -----  

-----  

SETTING_HOME=""
```

```

# ----- FILTER -----
-----
# | Filter out what files you want to decrypt
| -Pattern=xxx-Type=yyy-Target=zzz
|
# | where xxx is the filter pattern,
|
# |      yyy is the filter type, whice can be one of the
following: |
# |          [exact | exactMatchCase | contains |
containsMatchCase] |
# |          startWith | startWithMatchCase | endWith |
endWithMatchCase] |
# |      zzz is the filter target, which can be one of the
following: |
# |          [toFile | toFileDir | toDir]
|
# |
|
# | e.g. FILTER="-Pattern=.txt-Type=exact-Target=toFile"
|
# -----
FILTER="""

# ----- TEMP_DIR -----
-----
# | Directory to where you want to store decrypt files
temporarily |
# | e.g. TEMP_DIR="/tmp"
|
# -----
TEMP_DIR="""

# ----- VERIFY_CHKSUM -----
-----
# | set to "Y" if you want to verify in-file delta file
checksum during decrypt|
# | set to "N" if you do NOT want to verify in-file delta
file checksum during |
# | decrypt
|
# -----
VERIFY_CHKSUM="N"

## RunDataIntegrityCheck.sh

This script file is used to run data integrity check on your backup set. To configure the parameters, open the script file in a text editor like vi.

```
# vi RunDataIntegrityCheck.sh
```

Configure the following parameters:

- ➊ **SETTING\_HOME** – this is the directory to your setting home. If not set, the default directory is “\${HOME}/.obm”.  
e.g. SETTING\_HOME="/root/.obm"
- ➋ **BACKUP\_SET** – this is the name of the backup set which you want to run data integrity check on. There are two (2) ways to specify the backup set; by using the *backup set name* or by *backup set ID*. If the backup set name is not in English, use the backup set ID. You can leave this blank if you only have one (1) backup set. You can also run the data integrity check on all backup sets by using “ALL”.  
e.g. BACKUP\_SET="1119083740107", BACKUP\_SET="FileBackupSet-1" or  
BACKUP\_SET="ALL"
- ➌ **BACKUP\_DEST** – this is the name of the destination where the backup set was stored. There are two (2) ways to specify the destination; by using the *destination name* or *destination ID*. If the destination name is not in English, use the DestinationID. You can leave this blank if you only have one (1) backup destination. This will be disregarded if BACKUP\_SET="ALL".  
e.g. DESTINATION="1119083740107" or DESTINATION="CBS"
- ➍ **CRC\_MODE** – you can set here if you want to run cyclic redundancy check while doing the data integrity check. There are two (2) options available: *ENABLE-CRC* or *DISABLE-CRC*  
e.g. CRC\_MODE="DISABLE-CRC" or CRC\_MODE="ENABLE-CRC"

```
# vi RunDataIntegrityCheck.sh
#!/bin/sh
#####
##### RunDataIntegrityCheck.sh
#####
```

```

# You can use this shell script to run any of your backup
sets from the          #
# command line. Just customize the "User Defined Section"
below with your          #
# values for your backup action.
#
#####
##### START: User Defined Section
#####

#####
# ----- SETTING_HOME (Optional) -----
#
# | Directory to your setting home.
|
# | Default to ${HOME}/.obm when not set.
|
# | e.g. SETTING_HOME="${HOME}/.obm"
|
# -----
#
SETTING_HOME=""

#
# ----- BACKUP_SET -----
#
# | The name or ID of the backup set that you want to run.
|
# | If backup set name is not in English, please use ID
instead.           |
# | e.g. BACKUP_SET="1119083740107"
|
# | or BACKUP_SET="FileBackupSet-1"
|
# | You can use "ALL" to run data integrity check for all
backup sets.           |
# | i.e. BACKUP_SET"ALL"
|
# |
|
# | You can leave this parameter blank if you have only 1
backup set.           |
# -----
#
BACKUP_SET="ALL"

#
# ----- BACKUP_DEST -----
#
# | The name or ID of the backup destination that you want to
run.           |
# | If backup destination name is not in English, please use
ID instead.           |
# | e.g. BACKUP_DEST="1740107119083"
|
# | or BACKUP_DEST="Destination-1"
|
# | You can use "ALL" to run data integrity check for all
destinations.           |
# | i.e. BACKUP_DEST"ALL"
|

## Appendix K How to Create a Free Trial Account

Users can create a free trial account when they login to AhsayOBM for the first time. Please ensure that the following requirements are met before creating your trial account:

- A valid email address which will be used for receiving notices. A welcome message will also be sent upon creation of the account which specifies the User Setting and Quota set for backup in AhsayCBS.

While here are the limitations of a trial account:

- The Free Trial button will only be displayed once, when the user login for the first time. If you cannot create a free trial account kindly contact your backup service provider.
- Only alphanumeric characters and selected special characters, A to Z, 0 to 9, @, - and \_ are allowed to be used for the Login name. While there may be some limitations on password complexity and age which is determined by your backup service provider. Please contact your backup service provider for further details.
- The add-on modules available and quota size are determined by your backup service provider.
- The trial account period is also determined by your backup service provider. Please contact your backup service provider for details.

### NOTE

The Free Trial Registration option may not be available. This depends on the settings of your backup service provider. Please contact your backup service provider for more information.

Follow the steps below to create a Free Trial backup account in AhsayOBM.

1. Select (2).

```
Login Menu (No configuration files found)
-----
(1). Login
(2). Free Trial
(3). Quit
-----
Your Choice: 2
```

2. Configure the backup server setting.

```
Backup Server URL : 10.90.10.11
Port : 80
Protocol? (1) Http (2)Https : 1
Enable Proxy (Y/N) ? n
```

3. Enter your login name, password and email address.

```
Register Trial User
Login Name : trial
Password : *****
Re-Enter password : *****
```

```
Email address : name@email.com  
Please wait while verifying user account with server...  
Your trial account (trial) has been created on server  
(10.90.10.11:80).  
New configuration file has been created
```

4. Once trial account is created the Main Menu will be displayed.

```
Main Menu  
-----  
(1). List Backup Sets  
(2). Delete Backup Set  
(3). Export Backup Set Settings to XML  
(4). Import Backup Set Settings from XML  
(5). Generate new Backup Set Settings Template  
(6). Change Language [English]  
(7). Update Profile Settings  
(8). Quit  
-----  
Your Choice:
```

5. After creating the trial account, you need to check several things:

- The expiry date of the trial account, which determines when it will be suspended.
- The Language which will be used for sending reports.
- And the Timezone, this is to ensure that your backup schedule will run at the correct time.

You can check this by logging in to AhsayCBS, go to **Backup / Restore > User > User Profile > General**. For more information please refer to the [AhsayCBS User's Guide](#).

User Profile	General	Backup Client Settings	Contact	User Group	Security Settings
Backup Set	<b>Suspend At</b> <input checked="" type="checkbox"/> 06-Sep-2019				
Settings	<b>Status</b> <input checked="" type="radio"/> Enable <input type="radio"/> Suspended <input type="radio"/> Locked

<input checked="" type="checkbox"/>		Mobile 0	<input checked="" type="checkbox"/>		NAS - QNAP																																																												
<input checked="" type="checkbox"/>		Volume Shadow Copy	<input checked="" type="checkbox"/>		In-File Delta																																																												
<input checked="" type="checkbox"/>		OpenDirect / Granular Restore 0	<input checked="" type="checkbox"/>		Office 365 Backup 2																																																												
	<b>Quota</b> Unlimit storage space for the destination not shown in the following table <table border="1"> <thead> <tr> <th>+</th> <th>Destination</th> <th>Quota</th> </tr> </thead> <tbody> <tr> <td><input type="button"/></td> <td>AhsayCBS</td> <td>50.0 Gbytes</td> </tr> </tbody> </table> <p>(If preempted mode is enabled in policy settings, the quota settings are disabled)</p>					+	Destination	Quota	<input type="button"/>	AhsayCBS	50.0 Gbytes																																																						
+	Destination	Quota																																																															
<input type="button"/>	AhsayCBS	50.0 Gbytes																																																															

7. Lastly, you need to verify if your contact details are correct by going to the **Contact** tab. If you want to add more contact information, you can add it here.

The screenshot shows a user profile interface with a sidebar on the left containing links: User Profile, Backup Set, Settings, Report, Statistics, and Effective Policy. The main area has a tab navigation bar at the top with General, Backup Client Settings, Contact (which is selected and highlighted in blue), User Group, and Security Settings. Below the tabs, there is a section titled "Manage Contact Information" with a help icon. It features two buttons: a plus sign for adding new contacts and a trash can for deleting existing ones. A table lists one contact entry: Name (trial1) and Email (name@email.com). There is also a checkbox for "Encrypt Email" which is unchecked. The status "No" is shown next to the checkbox.

Name	Email	Encrypt Email
trial1	name@email.com	No

## Appendix L How to Manually Upgrade AhsayOBM

Before you proceed with upgrading of AhsayOBM to the latest version, make sure that you have read the [system requirements](#) especially if upgrading from AhsayOBM v6 or v7.

To upgrade AhsayOBM, follow the instructions below.

1. Uninstall the current AhsayOBM version depending on how AhsayOBM was installed. There are three ways to uninstall AhsayOBM.
  - Ⓐ To uninstall using **sh** script, refer to [Appendix D](#)
  - Ⓑ To uninstall using **rpm** script, refer to [Appendix E](#)
  - Ⓒ To uninstall using **dpkg** script, refer to [Appendix F](#)
2. Go to the download page of your backup service provider's website and select which type of installation method you would like to use.

3. Refer to [Chapter 4 Download and Install AhsayOBM](#) to download and install the latest version of AhsayOBM.
  - Ⓐ For online installation method using either **SH**, **RPM**, or **DEB** online installer, refer to [Ch. 4.1 Online Installation](#).
  - Ⓑ For offline installation method using **TAR GZ** offline installer, refer to [Ch. 4.2 Offline Installation](#).
