1 Overview

1.1 What is this software?

Ahsay brings you specialized client backup software, namely AhsayOBM, to provide a comprehensive backup solution for protecting file(s) / folder(s) on your machine and extend protection to both Android and iOS mobile devices, with a wide variety of backup destinations (major cloud storage service providers, FTP/SFTP, local drive, etc.) of your choice.

1.2 System Architecture

Below is the system architecture diagram illustrating the major elements involved in the backup process among the backup machine AhsayOBM, Ahsay Mobile app and AhsayCBS.

NOTE

The first mobile backup may take up a few hours to back up all photos, videos, documents and 2FA accounts from your device. Subsequent backups will take less time. Please do the following for the first mobile backup to prevent any interruption during backup process:

- For Android devices, disable screen lock or timeout
- For iOS devices, disable auto-lock
- Turn off all power saving modes
- Connect to power source

1.3 Mobile Backup Server

The Mobile Backup Server (MBS) will be utilized to handle mobile backup and restore of Ahsay Mobile app. It is an integral part of AhsayOBM.

The MBS will be activated automatically when a mobile device installed with the Ahsay Mobile app is successfully registered for mobile backup with AhsayOBM. Afterwards, it will be automatically restarted whenever the AhsayOBM services is restarted or when the AhsayOBM machine is rebooted or powered on. The MBS will be deactivated when all mobile devices have deregistered from the mobile backup settings and the AhsayOBM services is restarted.

The MBS will use the following port ranges:

- TCP Port: 54000 to 54099
- UDP Port: 54200 to 54299
- Protocol: Http, for the request of Ahsay Mobile app

The default TCP and UDP ports are **54000** and **54200**, if these ports are already used by other applications or services, then the MBS will automatically acquire another port(s).

The actual TCP and UDP port can be seen on AhsayOBM when pairing a mobile device for mobile backup.

Photos, videos, documents and 2FA accounts are stored either in mobile device's internal memory or SD Card. These are selected as backup source using the Ahsay Mobile app and will be backed up to the local destination of an Ahsay machine, that can be a Hard Drive, Flash Drive, and/or Network Drive in their *original* unencrypted format. For Android devices, photos and videos will retain all EXIF. While for iOS devices, photos and videos will retain most of the EXIF including, capture date, location, and lens.

www.ahsay.com

If storage of photos, videos, documents and 2FA accounts to AhsayCBS and/or Predefined Destination is required, then this can be done using AhsayOBM to perform a secondary backup and restore of the photos, videos, documents and 2FA accounts on the local drive to AhsayCBS and/or Predefined Destination.

To back up and restore photos, videos, documents and 2FA accounts from Ahsay Mobile app to AhsayOBM then AhsayCBS and/or Predefined Destination is a two-step process.

1st: Back up photos, videos, documents and 2FA accounts from Ahsay Mobile app to AhsayOBM local destination.

2nd: Create a File backup set using AhsayOBM, using the local backup destination as the backup source. Then back up this backup set to AhsayCBS and/or Predefined Destination.

1.4 Two-Factor Authentication

Two-Factor Authentication (2FA) supports TOTP (Time-based One-time Password) and Push notification authentications using the Ahsay Mobile app to provide additional security for the user login process. Since aside from logging in with just a username and password, if the account has Two-Factor Authentication enabled, there will be an additional step necessary to login.

Upon initial login to AhsayOBM, you will have the option to set up Two-Factor Authentication, or you may skip the setup and do it later. If you proceed with the configuration of Two-Factor Authentication, it will be enabled for your account automatically. You may add more than one mobile device for authentication.

For logins with Two-Factor Authentication enabled, the authentication method that will be available will depend on the authenticator app registered during setup.

If Ahsay Mobile is used as the authenticator app:

- you will either accept the login request via push notification in the Ahsay Mobile app; or
- · enter the one-time password generated in the Ahsay Mobile app

If a third-party authenticator app is used:

 you will enter the one-time password generated in the third-party authenticator (i.e., Authy, Duo, Google Authenticator, Microsoft Authenticator, LastPass Authenticator, iOS 15 Builtin Two-Factor Authenticator, etc.) This illustrates the user login process for account with Two-Factor Authentication enabled using either the Ahsay Mobile app or a third-party authenticator app.

This illustrates the registration of mobile device(s) for Two-Factor Authentication using either the Ahsay Mobile app or a third-party authenticator app.

2 Requirements for Ahsay Mobile

2.1 Backup Software Version Requirement

- Download and install the latest version of AhsayOBM v9.0.0.0 or above.
- Download and install the latest version of Ahsay Mobile app on the Play Store for Android mobile devices and on the App Store for iOS mobile devices.

2.2 Network Connection

Ensure that the Ahsay Mobile app is connected to the same local network as the AhsayOBM machine. Failure to do so will prevent you from performing backup and/or restore.

2.3 Android and iOS Version Requirement

- For Android devices, the Android version must be 8 or above.
- For iOS devices, the iOS version must be 12.0.0 or above.

3 Requirements for AhsayOBM on macOS

3.1 Hardware Requirements

Refer to the link below for details of the minimum and recommended requirements for installing AhsayOBM:

FAQ: Ahsay Hardware Requirement List (HRL) for version 9.1 or above

3.2 Software Requirements

Refer to the following link for details of the operating systems, applications and databases supported by AhsayOBM:

FAQ: Ahsay Software Compatibility List (SCL) for version 9.1 or above

3.3 Full Disk Access Permission

macOS 10.15 or higher "Full Disk Access" permission needs to be granted in: System Preferences > Security & Privacy > Privacy tab to AhsayOBM and java

Due to an upgrade in security on macOS 10.15 or higher, additional security settings are required to allow applications to access the machine. AhsayOBM requires "Full Disk Access" permission to be able to access your files for selection and backup. Also, without "Full Disk Access" permission, the AhsayOBM will not be able to restore files to the machine.

For more details on how to setup the Full Disk Access permission, please refer to <u>Appendix C:</u> <u>Setting up Full Disk Access Permission.</u>

If AhsayOBM and java does not have "Full Disk Access" permission, upon opening AhsayOBM the following messages will be displayed and it will not open until the "Full Disk Access" permission is granted.

3.4 Installation on Root Drive

AhsayOBM must be installed on the root drive of a volume (e.g., /Applications/...).

3.5 **Two-Factor Authentication Requirements**

Please refer to **Chapter 2.4** of the <u>Ahsay Mobile User Guide for Android and iOS</u> for details of the minimum and recommended requirements for using Two-Factor Authentication on Ahsay Mobile app.

3.6 Mobile Backup Requirements

Please refer to **Chapter 2.5** of the <u>Ahsay Mobile User Guide for Android and iOS</u> for details of the minimum and recommended requirements for installing the Ahsay Mobile app.

3.7 Firewall Settings

Make sure that your firewall settings allows network traffic through the following domain and/or ports:

- For AhsayOBM to function correctly must allow outbound connections to *.ahsay.com via port 80 and 443.
- For mobile backup inbound / outbound network traffic must be allowed through the following default ports: HTTP port: 54000 and UDP port: 54200.

The actual ports used may be different, please refer to <u>Chapter 1.3: Mobile Backup</u> <u>Server (MBS)</u> for more details.

3.8 Network Bandwidth

10 Mbps or above connection speed.

3.9 ARM (M1) CPU

For AhsayOBM running on macOS 11 or above on ARM (M1) CPU machine, the installation of Rosetta 2 is required that enables applications built for Intel CPU to run on an ARM (M1) CPU machine:

https://support.apple.com/en-hk/HT211861

If AhsayOBM is installed and run for the first time on macOS 11 or above on ARM (M1) CPU machine, there will be a pop-up message that requests installation of Rosetta. When the following window appears, click **Install** to proceed.

	To open "App Name", you need to install Rosetta. Do you want to install it now?	
	Rosetta enables Intel-based features to run on Apple Silicon Macs. Reopening applications after installation is required to start using Rosetta.	
	Use of this software is subject to the Software License Agreement applicable to the software you are downloading. A list of Apple SLAs may be found here: http://www.apple.com/legal/sla/	
?	Not Now Install	

3.10 Limitations

- <u>Resource Fork Files</u> Resource fork files cannot be restored with AhsayOBM installation on macOS 10.8 above.
- <u>Case-Insensitive File System</u> For volume with a case-insensitive file system, target file of a symbolic link will be backed up twice (in both upper case and in lower case), hence, doubling the backup quota storage requirement.

• <u>Non-compressible files</u> – the following is a list of non-compressible files:

3.11 Best Practices and Recommendations

Periodic Backup Schedule

The periodic backup schedule should be reviewed regularly to ensure the interval is sufficient to handle the data volume on the machine. Over the time, data usage pattern may change on a production server, i.e., the number of new files created, the number of files which are updated/delete, new users may be added etc.

When using periodic backup schedules with small backup intervals such as backup every 1 minute, 2 minutes, 3 minutes etc. although the increased backup frequently does ensure that changes to files are captured regularly which allows greater flexibility in recovery to a point in time.

Consider the following key points to efficiently handle backup sets with periodic backup schedule.

- Hardware to achieve optimal performance, compatible hardware requirements is a must. Ensure you have the backup machine's appropriate hardware specifications to accommodate frequency of backups,
 - o so that the data is always backed up within the periodic backup interval
 - \circ $\,$ so that the backup frequency does not affect the performance of the production server
- Storage ensure you have enough storage quota allocated based on the amount of new data and changed data you will back up.
- Retention Policy also make sure to consider the Retention Policy settings and Retention Area storage management which can grow because of the changes in the backup data for each backup job.

4 Get Started with AhsayOBM

This quick start guide will walk you through the following six (6) major parts to get you started with using AhsayOBM.

Download and Install

Download and Install AhsayOBM on your macOS machine

Launch the App

Launch and log in to AhsayOBM

Set up 2FA and/or Mobile Backup

Register mobile device for 2FA and/or mobile backup (optional)

Create a Backup Set

Create a backup set according to your preference

Run Backup Jobs

Run the backup job to back up data

Restore Data

Restore backed up data to your system

5 Download and Install AhsayOBM

There are two installation modes of AhsayOBM, online installation and offline installation. Below is the table of comparison between online installation and offline installation.

	Online Installation	Offline Installation
Installation Time	 Takes more time as it needs to download the binary and component files (80MB to 132MB depending on operating system) each time the installation is run. Online installer size is 6KB to 3.5MB depending on operating system as it contains only the initial installation package files. 	 Takes less time as all the necessary binary and component files are already available in the offline installer and offline installer can be downloaded once but reused many times. Offline installer size is 50MB to 195MB depending on operating system as it contains all the necessary binary and component files.
Deployments	Suitable for single or small amount of device installations.	 Suitable for multiple or mass device installations.
	 Suitable for sites with fast and stable internet connection as internet connection is needed each time when an installation is run. A slow internet connection will result in longer installation time and 	Suitable for client sites with metered internet connections as once the offline installer is downloaded, internet connection is not needed each time when an installation is run.
	interrupted, or unstable internet connection may lead to unsuccessful installation.	May need to update the product version after installation if an older offline installer is used.
	Ensures the latest version of the product is installed.	

5.1 Download AhsayOBM

1. In a web browser, click the blue icon on the top right corner to open the download page for the AhsayOBM installation package file from your backup service provider's website.

- 2. In the **macOS** section under the **AhsayOBM** tab of the download page, you can choose between two installation methods:
 - Online installation using DMG online installer
 - Offline installation using TAR GZ offline installer

5.2 Install AhsayOBM

5.2.1 Online Installation using DMG online installer

1. Launch the online installation package file you have downloaded from the download section above.

2. The Ahsay Online Backup Manager window will appear. You will see another file named "obm.pkg". Double-click on the "obm.pkg" file.

3. When the AhsayOBM Installer wizard appears, click **Continue** to proceed.

5.3 AhsayOBM Services

The AhsayOBM Services is a key component which regulates and controls several important functions on AhsayOBM.

Function	Description
Continuous Backups (Windows platform only)	Ensures that Continuous backups are run according to the backup interval.
Reminder (Windows platform only)	Ensures that a reminder popup is displayed when the last time a backup was run exceeded the tolerance period.
Mobile Backup Server (MBS)	Ensures that registered mobile devices can perform backups to AhsayOBM.
	The MBS will be activated when a mobile device is registered for mobile backup on AhsayOBM.
	The MBS will be deactivated when all mobile devices have been deregistered from the mobile backup settings and the AhsayOBM services is restarted.

Therefore, it is very important to ensure the AhsayOBM Services are running after:

- a new AhsayOBM installation
- an AhsayOBM software update
- the machine was rebooted
- the machine is powered on
- the machine wakes up from hibernation or standby mode

Otherwise, all of the functions above will stop working.

To start, click Go at the top menu bar and select Utilities.

Open the Terminal application.

Use the command highlighted in red to enter the AhsayOBM folder.

```
[admins-Mac:bin admin$ cd /Applications/AhsayOBM.app/bin
[admins-Mac:bin admin$
```

To check if the scheduler service is running, use the **ps** command. You will see that the scheduler service is running, highlighted in red.

```
admins-Mac:~ admin$ ps -ef|grep java
0 5735 1 0 9:05PM ttys000 0:02.07
/Applications/AhsayOBM.app/jvm/bin/java -Xms128m -Xmx768m -
Djava.library.path=. -cp .:./cbs.jar cbs /Applications /AhsayOBM.app
501 5741 5705 0 9:05PM ttys000 0:00.00 grep java
```

There are two (2) options to **stop** and **start** the AhsayOBM scheduler service.

5.3.1 Option 1: Stop and Start

 To stop the scheduler service, use the command highlighted in red. If you run this command for the first time, you will need to enter the login password of your local machine. To check if the scheduler service has stopped running, use the ps command.

```
admins-Mac:~ admin$ sudo
/Applications/AhsayOBM.app/bin/StopScheduler.sh
Password:
admins-Mac:~ admin$ ps -ef|grep java
501 5721 5705 0 9:02PM ttys000 0:00.00 grep java
```

• Use the command highlighted in red to **start** the scheduler service then use the **ps** command. You will see that the scheduler service is running, highlighted in red.

```
admins-Mac:~ admin$ sudo
/Applications/AhsayOBM.app/bin/Scheduler.sh
admins-Mac:~ admin$ ps -ef|grep java
0 5735 1 0 9:05PM ttys000 0:02.07
/Applications/AhsayOBM.app/jvm/bin
/java -Xms128m -Xmx768m - Djava.library.path=. -cp .:./cbs.jar
cbs
/Applications/AhsayOBM.app
501 5741 5705 0 9:05PM ttys000 0:00.00 grep java
```

5.3.2 Option 2: Stop and Start

• To **stop** the scheduler service, use the command highlighted in red. Use the **ps** command to check if the scheduler service has stopped running.

```
admins-Mac:~ admin$ sudo launchctl unload -F
/Applications/AhsayOBM.app/
bin/com.cb.scheduler.plist
admins-Mac:~ admin$ ps -ef|grep java
501 5842 5793 0 9:23PM ttys000 0:00.01 grep java
admins-Mac:~ admin$
```

• Use the command highlighted in red to **start** the scheduler service then use the **ps** command. You will see that the scheduler service is running, highlighted in red.

```
admins-Mac:~ admin$ sudo launchctl load -F
/Applications/AhsayOBM.app/
bin/com.cb.scheduler.plist
admins-Mac:~ admin$ ps -ef|grep java
0 5805 1 0 9:21PM ?? 0:01.92
/Applications/AhsayOBM.app/jvm/bin/java -
Xms128m -Xmx768m - Djava.class.path=/Applications/AhsayOBM.app
/bin:/Applications/AhsayOBM.app/bin/cbs.jar -
Djava.library.path=/Applica
tions/AhsayOBM.app/bin cbs /Applications/AhsayOBM.app
501 5811 5793 0 9:21PM ttys000 0:00.00 grep java
```

5.4 RunLevel Symlink Check

During installation, the following symlinks will be created to the scheduler startup script: /Applications/AhsayOBM.app/bin/com.cb.scheduler.plist

This will allow the AhsayOBM Scheduler Service to automatically start each time the machine is rebooted or restarted.

To verify if the symlinks have been created correctly, use the **Is** command. You will see the symlink highlighted in red.

```
admins-Mac:~ admin$ ls -la /Library/LaunchDaemons/
total 16
drwxr-xr-x+ 62 root wheel 2108 Apr 5 01:56 ..
lrwxr-xr-x 1 root wheel 53 May 15 03:07 com.AhsayOBM.scheduler.plist ->
/Applications/AhsayOBM.app/bin/com.cb.scheduler.plist
admins-Mac:~ admin$
```

5.5 Mobile Backup Server (MBS) Status Check and Ahsay Mobile app Connection Check

Although the Mobile Backup Server (MBS) will be activated automatically when a mobile device installed with the Ahsay Mobile app is successfully registered for mobile backup with AhsayOBM.

Before starting a backup on your mobile device, check the following first:

1. Check HTTP port, IP address and UDP port in the **running.txt** file. Go to mbs folder. Example: /Applications/AhsayOBM.app/mbs

		 AhsayOBM

If the "running.txt" file does not exist, then the MBS is not running. Restart the AhsayOBM services.

After opening the file, it will show the HTTP port, IP address and UDP port which are in actual use by the MBS.

	running.txt —	Locked ~
{"http-port":"54000","http-addr":	[192.168.1.114]	"udp-Port":"54200"}
2. Open the Terminal and check if the IP address captured in the running.txt file is the correct IP address of the machine where AhsayOBM is installed.

3. To verify the actual HTTP port used by MBS, type the command:

				🏦 admin — -bash — 107×	12				
MacBook-	Pro:~ a	dmin\$	netstat -vanp tcp \	grep 54000					
Active I	internet	conn	ections (including ser	rvers)					
Proto Re	cv-Q Se	nd-Q	Local Address	Foreign Address	(state)	rhiwat	shiwat	pid	epid
tcp4	0	0	192.168.1.114.49342	125.5.184.164.80	CLOSE_WAIT	32768	32768	66	0
tcn4	Ø	Ø	127.0.0.1.64050	* *	LISTEN	131072	131072	66	0
tcp46	0	0	*.54000	*.*	LISTEN	131072	131072	66	0
тср4	Ø	U	192.168.1.114./0/0	192.168.1.111.5005/	ESTABLISHED	262144	311296	84	0
tcp4	0	0	*.49192	*.*	LISTEN	131072	131072	84	0
tcp4	0	0	192.168.1.114.49192	92.223.85.120.80	ESTABLISHED	131072	131860	84	0
tcp4	0	0	192.168.1.114.49191	17.57.145.68.5223	ESTABLISHED	131072	131860	91	0
tcp4	0	0	*.7070	*.*	LISTEN	131072	131072	84	0

- 4. Make sure that your firewall setting allows network traffic through the following HTTP and UDP ports to ensure that the communication between your machine and mobile device is successful: HTTP Port: 54000 to 54099 and UDP Port: 54200 to 54299. Otherwise, mobile backup and restore will not work.
- 5. To perform a status check on the MBS. Open a browser on the AhsayOBM machine and type the IP address, followed by the TCP port.

For example: If the HTTP port used is 54000, http://192.168.1.114:54000, you should get the following result which shows "Running" status. This means the MBS is running.

In the AhsayOBM machine

$\bullet \bullet \bullet \checkmark >$	192.168.1.114:54000	Ċ	A	* +
Running				

6. To run a connection test between the mobile device and machine open a browser in your mobile device and type the IP address followed by the TCP port.

For example: If the HTTP port used is 54000, http://192.168.1.114:54000, you should get the following result which shows "Running" status. This means the Ahsay Mobile app can successfully connect to the MBS and both backup and restore can proceed on the mobile device.

In the mobile device

6 Register device for 2FA in AhsayOBM

There are two types of Authenticator that can be used to register a device for 2FA in AhsayOBM:

- Ahsay Mobile Authenticator
- Third-party TOTP Authenticator (e.g., Microsoft Authenticator, Google Authenticator, Authy, Duo, LastPass Authenticator, iOS 15 Built-in Two-Factor Authenticator, etc.)

The 2FA registration steps using the different types of authenticator will be discussed in this chapter.

- Using Ahsay Mobile Authenticator
 - Supports two types of authentication:
 - i) Push Notification
 - ii) TOTP
 - > Can be configured to support two 2FA modes:
 - i) Push Notification and TOTP (default mode); or
 - ii) TOTP only
- Using Microsoft Authenticator
- Using Google Authenticator

6.1 Using Ahsay Mobile Authenticator

To register a device for 2FA in AhsayOBM using Ahsay Mobile, here are the two scenarios:

- Without Mobile Add-on Module
- With Mobile Add-on Module

6.1.1 Without Mobile Add-on Module

To register a device for 2FA <u>without Mobile Add-on Module</u>, please follow the steps below:

1. A shortcut icon of AhsayOBM will be available on your desktop after installation. Double-click the icon to launch the application.

 The Free Trial Registration option may be displayed when you login for the first time. If you want to create a free trial account please proceed to <u>Appendix E</u>. Otherwise, click Login if you already have an AhsayOBM account.

	English
O AhsayOBM	
The Best On-Premises & Cloud Backup Software	
Free Trial or Login	

NOTE

The **Free Trial** registration option may not be available. This depends on the settings of your backup service provider. Please contact your backup service provider for more information.

3. The **Show advanced option** may not be available if the backup server settings are already setup by your backup service provider. Please contact your backup service provider for more information.

Proxy (HTTP)	
Use proxy to access the Internet Off	

4. Enter the login name and password of your AhsayOBM account provided by your backup service provider. Then, click **OK** to log in.

	English
Login Login name MobileUser	
Password ••••••	
Save password Forgot password	
Show advanced option	ОК

NOTE

The **Save password** option may not be available. This depends on the settings of your backup service provider. Please contact your backup service provider for more information.

5. You will have the option to set up your 2FA. Click **Setup Now**.

If you do not want to set up the 2FA feature, click the **Skip Feature Setup** link. If you click **Yes** in the pop-up message that will be displayed, it will skip to **step 8**. Otherwise, click **No** to continue with the set-up of the 2FA feature.

6. Download the Ahsay Mobile app from the App Store / Google Play Store.

- 7. Ahsay Mobile supports two types of authentication method:
 - Push Notification
 - > TOTP

Ahsay Mobile can be configured to support two 2FA modes:

- Push Notification and TOTP (default mode) or
- ➤ <u>TOTP only</u>

Push Notification and TOTP (default mode)

i. To configure Push Notification and TOTP 2FA with Ahsay Mobile, simply scan the displayed QR code using the Ahsay Mobile app.

ii. In this example, the Ahsay Mobile app is installed on a mobile device named "Androidv10".

Tap **OK** to continue.

QR Code detected!	
Register Androidv10 with MobileU	ser?
CANCEL	ок

Once the device is successfully paired, the following message will be displayed in the Ahsay Mobile app. You can set up a recovery number here that will be used in case of "Authentication Recovery" procedure by tapping **OK**. Otherwise, tap **LATER** to set it up later on.

iii. After successful scan of the QR code, you have now registered Ahsay Mobile for Push Notification and TOTP 2FA. Click **OK** to continue.

Phone number verification for account recovery

iv. In the Ahsay Mobile app, go to 2FA then enter the phone number for account recovery. Tap **Enter recovery phone number**.

NOTE

Although push notification and TOTP will still work if the recovery phone number registration is not completed, it is still strongly recommended to complete **step iv** as you will not be able to access the AhsayOBM if you lose your mobile device which also means loss of access to backup data.

Select your country code and enter your phone number. Tap **Send SMS** verification code.

vi. Once the registration is successful, the following screen will be displayed. You have now registered Ahsay Mobile for TOTP only 2FA.

NOTE In case device pairing takes a while, session timeout message will be displayed. Just click OK to resume with the device pairing.

Mobile Setup

Due to session timeout, Two-Factor Authentication feature failed to be configured. Click [OK] to configure the feature again.

8. After successful pairing, the following screen will appear.

6.1.2 With Mobile Add-on Module

To register a device for 2FA with Mobile Add-on Module enabled, please follow the steps below:

1. A shortcut icon of AhsayOBM will be available on your desktop after installation. Double-click the icon to launch the application.

 The Free Trial Registration option may be displayed when you login for the first time. If you want to create a free trial account please proceed to <u>Appendix E</u>. Otherwise, click Login if you already have an AhsayOBM account.

NOTE

The **Free Trial** registration option may not be available. This depends on the settings of your backup service provider. Please contact your backup service provider for more information.

3. The **Show advanced option** may not be available if the backup server settings are already setup by your backup service provider. Please contact your backup service provider for more information.

The **Save password** option may not be available. This depends on the settings of your backup service provider. Please contact your backup service provider for more information.

5. You will have the option to set up your 2FA and mobile backup if the **Mobile Add**on **Module is enabled** in the backup account. Click **Setup Now**.

New Ahsay Mobile App, Free of Charge!

Backup Your Mobile

Easily backup photos and videos to your PC or Mac through Wi-Fi. Stop paying for public cloud storage when local storage is free and MORE secured.

Keep Hackers Off

All hackers delete backup data after compromising a machine. Use Two-Factor Authentication (2FA) to keep hackers off your backup data and turn ransomware harmless.

Setup Now

6. Download the Ahsay Mobile app from the App Store / Google Play Store. Ensure that the displayed Prerequisites are met.

7. By using the Ahsay Mobile app, tap **Next** and scan the QR code displayed in AhsayOBM.

Tap OK to continue.

Once the device is successfully paired, the following message will be displayed in the Ahsay Mobile app. Click **OK** to continue.

Device paired successfully	
You may now configure the device content e.g Photos, Video, 2FA Accounts(if registered) to be included for backup	
ок	

Once the device is successfully paired, the following message will be displayed in the Ahsay Mobile app. You can set up a recovery number here that will be used in case of the "Authentication Recovery" procedure by tapping **OK**. You may refer to <u>Phone number verification for account recovery</u> in **Chapter 6.1.1** for the following setup. Otherwise, tap **LATER** to set it up later on.

8. After successful scan of the QR code, you have now registered Ahsay Mobile for 2FA (Push Notification and TOTP) and Mobile Backup. Click **OK** to continue.

9. After successful pairing, the following screen will appear.

6.2 Using Microsoft Authenticator

To register a device for TOTP 2FA in AhsayOBM using Microsoft Authenticator, please follow the steps below:

1. Download and install the Microsoft Authenticator from the Play Store for Android devices or the App Store for iOS devices.

2. Launch the Microsoft Authenticator app.

3. Tap Add account.

4. Select Other account (Google, Facebook, etc.).

5. Allow permission to take pictures and record video.

6. Set up the account by selecting from the following methods: Scan the QR code or Enter code manually.

Method 1: Scan the QR code

i. Scan the QR code on AhsayOBM.

Example of the displayed QR code:

Two-Factor Authentication is enable app to scan the QR code to complete	ed for helping safeguard access to your account, please use the below authenticator the device registration.

7 Logging in to AhsayOBM

Login steps without 2FA and with 2FA using the different types of authenticator will be discussed in this chapter.

- Login to AhsayOBM without 2FA
- Login to AhsayOBM with 2FA using Ahsay Mobile Authenticator
 - Push Notification and TOTP 2FA
 - > TOTP only 2FA
- Login to AhsayOBM with 2FA using Microsoft Authenticator
- Login to AhsayOBM with 2FA using Google Authenticator
- Login to AhsayOBM with 2FA using Twilio

7.1 Login to AhsayOBM without 2FA

When logging in to AhsayOBM <u>without two-factor authentication</u>, please follow the steps below:

1. Double-click the icon to launch the application.

2. Enter the login name and password of your AhsayOBM account provided by your backup service provider. Then, click **OK** to log in.

3. Unable to perform the "Authentication Recovery" procedure

If you are not able to perform the "Authentication Recovery" procedure, click the **Unable to login/Do not have any Authenticator App(s)** link, then the following message will be displayed "Please contact your backup server administrator for assistance" in gaining access to your AhsayOBM account.

9 AhsayOBM Overview

O AhsayOBM	MobileUs	Profile Language	Informat
E Alisay Cont	Backup Sets	er r Kunger	f V 8: in
Restore	Settings	U tilities	

AhsayOBM main interface has nine (9) icons that can be accessed by the user:

- Profile
- Language
- Information
- Backup
- Backup Sets
- Report
- Restore
- Settings
- O <u>Utilities</u>

9.1 Profile

The **Profile** icon shows the settings that can be modified by the user. The features that will be shown will depend on if the user accounts was using Twilio Two-Factor Authentication in prior to upgrading to v8.5.0.0 or above and continues to use Twilio.

There are seven (7) available features:

- General
- Ontacts
- Time Zone
- Encryption Recovery
- <u>Password</u> (Only shown for backup accounts created prior to AhsayOBM v8.5.0.0 and using Twilio for two-factor authentication.)
- Authentication
- <u>Security Settings</u> (Only shown for backup accounts created prior to AhsayOBM v8.5.0.0 and using Twilio for two-factor authentication.)

9.1.1 General

The General tab displays the user's information.

Profile	User Information
General	Display name
Contacts	
Time Zone

Password	
Security Settings	
	Save Cancel Help
	NOTE

The **Save password** option may not be available. This depends on the settings of your backup service provider. Please contact your backup service provider for more information.

9.1.6 Authentication

You can use the Authentication function to:

- Ohange the "<u>Password</u>".
- Enable or disable the "<u>Two-Factor Authentication</u>".
- Add one or more device(s) registered for Two-Factor Authentication (2FA).

NOTE Please refer to **Chapter 6.3.1** of the <u>Ahsay Mobile User Guide for Android and iOS</u> for the detailed step-by-step procedure.

- Remove one or more device(s) registered for Two-Factor Authentication (2FA).
- <u>Re-pair</u> mobile device with AhsayOBM account.
- View details of the "<u>Last Successful Login</u>" for Password Lock and Two-Factor Authentication (2FA).

NOTE

For Two-Factor Authentication (2FA), you can register your mobile device on both Ahsay Mobile app and a third-party authenticator apps (e.g., Authy, Duo, Google Authenticator, Microsoft Authenticator, LastPass Authenticator, iOS 15 Built-in Two-Factor Authenticator, etc.).

Re-enter password		
•••••		

4. Click **Save** to store the settings.

Two-Factor Authentication

To enable the two-factor authentication feature, follow the instructions below:

NOTE The Ahsay Mobile app or a third-party authenticator apps is needed for 2FA.

1. Go to Profile > Authentication > Two-Factor Authentication.

2. Swipe lever to the right to turn it on.

For the detailed step-by-step procedure on how to add a mobile device, please refer to **Chapter 6.3.1** of the <u>Ahsay Mobile User Guide for Android and iOS</u>.

To remove a mobile device, follow the instructions below:

1. Click the *button on the left side of the registered mobile device. In this example, we are going to delete the mobile device named "MobileUser1".*

2. A confirmation message will appear, click Yes to proceed. Otherwise, click No.

3. Mobile device is successfully removed.

To disable the two-factor authentication feature, follow the instructions below:

NOTE Sliding the switch to right hand side will only turn off the two-factor authentication but it will not automatically delete the registered mobile device(s) for Two-Factor Authentication. If you need to delete the registered mobile device(s), this must be done manually first before disabling Two-Factor Authentication

1. Swipe the lever to the left to turn it off.

Re-pair with authenticator

AhsayOBM supports "Re-pair with authenticator" feature that enables user to re-pair their AhsayOBM account with Ahsay Mobile Authenticator as long as the mobile device used for the 2FA is still registered in the AhsayOBM. This feature is used when:

- 1. The registered profile for the 2FA is removed from the Ahsay Mobile app
- 2. The Ahsay Mobile app is accidentally uninstalled from the mobile device

9.3 Information

The **information** icon displays the product version and system information of the machine where the AhsayOBM is installed.

9.4 Backup

This feature is used to run your backup set(s).

For instructions on how to start a backup, refer to Chapter 12 Run Backup Jobs.

9.5 Backup Sets

A **backup set** is a place for files and/or folders of your backed-up data. This feature allows user to select files individually or entirely in a selected folder to back up. It is also used to delete backup set(s).

To create or modify a backup set, follow the instructions on Chapter 10 Create a Backup Set.

Backup Set Settings

Below is the list of configurable settings under a Backup Set:

- General
- Source
- Backup Schedule
- Destination

(Advanced settings)

- Deduplication
- Retention Policy
- <u>Command Line Tool</u>
- Bandwidth Control
- Others

General

• • •	AhsayOBM	
Data Backup	General Name	
General	Data Backup	
Source	Owner admins-Mac-5	
Backup Schedule		
Destination		
Show advanced settings		
Delete this backup set		Save Cancel

This feature allows the user to modify the current name of the backup set.

To modify the name of a backup set, follow the steps below:

1. In the **Name** field, enter a new backup set name.

General	
Name	
Owner	
admins-Mac-5	

2. Click the **Save** button to save the updated backup set name.

NOTE

In assigning a backup set name, make sure that it does not have an identical name.

Source

• • •	AhsayOBM

🔲 🎜 Music
Dictures

To know the locations of the folder(s) that will be backed up for each selected backup source, refer to the following table:

Backup Sourc	e	Description
Desktop	1007	If Desktop is selected, all files and/or folders in the following location will be backed up: \$UserProfile/admin/Desktop
		If admin is selected, all files and/or folders located in the following locations will be backed up: \$UserProfile/admin
		\$UserProfile/Library
		If the Follow Link is enabled, the following locations will also be included to the backup job:
		\$UserProfile/\LocalStorage
odmin		\$UserProfile/Applications
admin		\$UserProfile/admin/Downloads
		\$UserProfile/admin/Library
		\$UserProfile/admin/temp
		The Follow Link is configured as enabled by default.
	Note : If you select admin during the creation of backup set, the entire Backup Source in the Quick or Shortcut option will also be selected (e.g., Desktop, Documents, Movies, Music, Pictures), but you may choose to unselect any of each.	
Documents		If Documents is selected, all files and/or folders located in the following location will be backed up:
		\$UserProfile/admin/Documents
Movies		If Movies is selected, all files and/or folders located in the following location will be backed up:
		\$UserProfile/admin/Movies

Music	,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,	If Music is selected, all files and/or folders located in the following location will be backed up: \$UserProfile/admin/Music
Pictures		If Pictures is selected, all files and/or folders located in the following location will be backed up: \$UserProfile/admin/Pictures

To select files and/or folders to back up using the Quick or Shortcut option, follow the steps below:

1. Select a backup source.

Backup Source
Select the files and folders that you want to backup
🔲 🏦 admin
Documents
Movies
🗌 🎜 Music
Dictures

2. Click the **Save** button to save the selected backup source.

Option no. 2: Filter

This option allows the user to manually select files and/or folders in the selected location(s) to back up.

To select files and/or folders to back up using the Filter Backup Source, follow the steps below:

1. Slide the lever to the right to turn on the filter setting.

Filter	
Apply filters to the	ne backup source
On	

2. Click the [+] button to create a filter.

3. Assign a desired name to the backup filter.

	/ Bac	Kup	riite	1	
Name					
Filter	-1				

4. Configure the following options.

For each of the matched files/folders under top directory • Include them • Exclude them				
Exclude all unmatched files/folders				
Match file/folder names by				
● Simple comparison ends with ►				
O Regular expression (UNIX-style)				

5. In this example, all files and/or folders that end with the letter 'X' will be included to the backup job. You can add multiple patterns here.

Existing patterns to match	
×	X
Add	

6. Select whether you would like to apply the filter to all files and/or folders in all hard disk drives or to a specific folder only. If 'This folder only' is selected, click the **Change** button to specify the folder where you would like to apply the filter to.

0	oly this filter to all files/folders in All hard disk drives This folder only	
	/Users/admin/Desktop	Change
	oly to File ✔ Folder	

7. Click the **OK** button to save the created filter, then click the **Save** button to save the settings. Once you run a backup, all files and/or folders that match the applied filter will be backed up.

NOTE: Multiple backup filters can be created by clicking the **Add** button.

Option no. 3: Advanced Backup Source

This option allows the user to display the locations in the backup source to select files and/or folders to back up.

• •	AhsayOBM

Figure 1.2

Figure 1.1 – Periodic scheduled every 4 hours Monday - Friday for business hours **Figure 1.2** – Normal schedule run at 21:00 or 9:00 PM daily on Saturday and Sunday for weekend non-business hours

- Stop the stop time of the backup job. This only applies to schedules with start backup "at" and is not supported for periodic backup schedule (start backup "every")
 - until full backup completed this option will stop a backup job once it is complete. This is the configured stop time of the backup job by default.
 - after (defined no. of hrs.) this option will stop a backup job after a certain number of hours regardless of whether the backup job has completed or not. This can range from 1 to 24 hrs.

The number of hours must be enough to complete a backup of all files in the backup set. For small files in a backup, if the number of hours is not enough to back up all files, then the outstanding files will be backed up in the next backup job. However, if the backup set contains large files, this may result in partially backed up files.

For example, if a backup has 100GB file size which will take approximately 15 hours to complete on your environment, but you set the "stop" after 10 hours, the file will be partially backed up and cannot be restored. The next backup will upload the files from scratch again.

The partially backed up data will have to be removed by running the <u>Data Integrity</u> <u>Check.</u>

As a general rule, it is recommended to review this setting regularly as the data size on the backup machine may grow over time.

- Run Retention Policy after backup if enabled, the AhsayOBM will run a Retention Policy job to remove files from the backup destination(s) which have exceeded the Retention Policy after performing a backup job.
- 4. Click the **OK** button to save the configured backup schedule settings.
- 5. Click the **Save** button to save settings.

NOTE

For backup sets with multiple backup schedules configured **at the same time**, this will be the order of priority to determine which schedule will be run:

1. Backup type: Full > Differential

While for Schedules that have selectable Backup Type:

- IBM Lotus Domino: Database > Log
- MS Exchange Server: Database > Log File
- MS SQL Server: Full > Differential > Incremental (VSS Backup Mode)

Full > Differential > Transaction Log (ODBC Backup Mode)

- MS Hyper-V: Full > Incremental
- Oracle Database: Database > Log
- ShadowProtect: Complete > Differential > Incremental
- VMWare: Full > Incremental
- 2. Stop: after X hours > after Y hours > until full backup completed (where X < Y)
- 3. Run Retention Policy after backup: enabled > disabled
- 4. Schedule type: Daily > Weekly > Monthly > Custom
- 5. Creation order

Examples:

- a. If there are 2 backup schedules with Full backup type and with Stop after 2 hours and 4 hours respectively. The backup schedule with Stop after 2 hours will be run.
- b. If there are 2 backup schedules with any Run Retention Policy enabled, it will have priority and execute that Schedule in this instance and ignore Schedule Type prioritization.
- c. For backup sets with backup schedules Daily and Weekly, the Daily backup schedule will be run.

Destination

This feature allows the user to select a backup mode and add an additional storage destination.

There are two (2) types of backup mode:

Backup mode	Description
Sequential	This is the configured backup mode by default. This backup mode will run a backup job to each backup destination one by one.
Concurrent	This backup mode will run a backup job to all backup destinations simultaneously.

Comparison between Sequential and Concurrent Backup mode

Backup mode	Pros	Cons
Sequential	Takes less resources in the local machine (e.g., memory, CPU, bandwidth, etc.) to complete a backup job.	Backup job is slower than in concurrent mode since the backup job will upload the backup data to the selected backup destinations one at a time.
Concurrent	 Backup job is faster than in Sequential mode. Maximum number of concurrent backup destinations can be configured. 	Requires more resources in the local machine (e.g. memory, CPU, bandwidth, etc.) to complete a backup job.

To modify the Backup mode, follow the steps below:

- 1. Go to Backup Sets, then choose a backup set.
- 2. Select the **Destination** tab in the backup set settings.
- 3. Click the drop-down button to select a backup mode.

4. If "Concurrent" is selected, click the drop-down button to select the no. of maximum concurrent backup destinations.

Maximum concurrent backup destination			
	Unlimited	~	

5. Click the **Save** button to save the selected backup mode.

To add a new storage destination, follow the steps below:

1. Click the **Add** button.

2. Click the drop-down button to select a backup destination.

New Storage Destinati	ion / D
Name	
AhsayCBS	
Destination storage	
G AhsayCBS	~
G AhsayCBS	
GoogleDrive-1	
📓 Local / Mapped Drive / Removal	ole Drive

3. If the Local / Mapped Drive / Removable Drive is selected, click the **Change** button to select a new storage destination, then click the **Test** button to validate access to it.

Destination storage		
🚇 Local / Mapped Drive / Removable Drive	¥	
Local path		
/Users/admin/Documents/New Destination/		Change
Test		

4. Click the **OK** button to save the added storage destination, then click the **Save** button to save the updated backup mode and the added storage destination.

To continue on with the menu, click the **Show advanced settings** link to modify the **Deduplication**, **Retention Policy**, **Command Line Tool**, **Bandwidth Control**, and other configurable items under the **Others** tab.

• • •	AhsayOBM
Data Backup	Destination
General	Backup mode Sequential
Source	Existing storage destinations
Backup Schedule	C AhsayCBS Host: 10.90.30.22:80 Add
Destination Show advanced settings	Αυσ
Delete this backup set	Save Cancel

Deduplication

Starting with AhsayOBM v9.0.0.0 or above, the In-File Delta feature (i.e., Incremental, Differential and Full) will be replaced with Deduplication. This feature is **On (enabled)** by default.

When this feature is **On (enabled)** for the backup set, a checksum verification of each backup file which was split into several blocks of varying size will be performed to compare its content and identify which block is duplicated, thus will perform deduplication of data.

When this feature is **Off (disabled)** for the backup set, a checksum verification of each backup file will not be performed, thus the duplicated data will NOT be removed or deduplicated during a backup job.

There are two (2) types of Deduplication scope:

Deduplication Scope	Description
Same file path within the same backup set	Deduplication will be applied to the duplicated contents within a file during the current backup job
All files within the same backup set	Deduplication will be applied across different files in the backup set.

Migrate Data

When this option is enabled, the existing data will be migrated to the latest version during a backup job. This option is disabled by default.

Migrate Data		
Migrate existing	data to	latest version

To configure the Deduplication settings, follow the steps below:

1. Select a type of Deduplication scope.

Deduplication
Enable Deduplication On
Deduplication scope Same file path within the same backup set All files within the same backup set

2. Click the drop-down button to select the block size that will be used for the deduplication data block.

The **optimal settings** is good for frequently changed source data, as this is the smallest block deduplication will use to compare and determine if the data is new and should be uploaded or discarded as duplicate. The larger the deduplication block size, the less efficient it would be but faster as there are less blocks of data to create. Frequent changes to this setting is not advisable since all data may need to be reuploaded because the previous block size and new block size are now different.

Block size		
64 k - 256 k (optimal settings)	~	Bytes
64 k – 256 k (optimal settings)		
128 k – 512 k		
256 k – 1 M		
512 k – 2 M		
1 M - 4 M (save less space but faster)	

3. Tick the checkbox if you want the existing data to be migrated to the latest version during a backup job.

Migrate Data
Migrate existing data to latest version

4. Click the **Save** button to store the modified Deduplication settings.

NOTE

For more details about the **Deduplication** feature, refer to the <u>AhsayCBS v9 New Features</u> <u>Supplemental document</u>.

Run Backup Job

When the Deduplication feature is enabled for the backup set, a **Migrate Data** option will be available in the *advanced backup options* which can be configured before starting a backup job.

Below is an example of a backup set with Deduplication setting **enabled**.

Choose Your Backup Options

Retention Policy

When the AhsayOBM identifies files and/or folders that are deleted, updated, or with updated permission/attributes during a backup job, these files and/or folders will then be moved from the data area to the Retention Area.

Retention Area is a place used as a temporary destination to store these files (deleted, updated, or with updated permission/attributes during a backup job). Files and/or folders in the Retention Area can still be restored.

The **Retention Policy** is used to control how long these files remain in the Retention Area before they are removed which can be specified in the number of days, weeks, months, or backup jobs. Retained data within all backup destinations (e.g., AhsayCBS, local drive, SFTP/FTP, and cloud storage) are cleared by the Retention policy job.

The default Retention Policy setting for a File Backup Set is 7 days, but the appropriate Retention Policy setting depends on individual, contractual, or regulatory requirements.

	AhsayOBM
BackupSet-2	Retention Policy

Retention Policy	
Command Line Tool	
Bandwidth Control	
Others Hide advanced settings	
Delete this backup set	Save Cancel

NOTE

There is a trade-off between the Retention Policy and backup destination storage usage. The higher the Retention Policy setting, the more storage is used, which translates into higher storage costs.

There are two (2) types of Retention Policy:

Туре	Description	
Simple	A simple Retention Policy is a basic policy where the retained files (in the Retention Area) are removed automatically after the user specifies the number of days or backup jobs.	
Advanced	An advanced Retention Policy defines a more advanced and flexible policy where the retained files (in the Retention Area) are removed automatically after a combination of user defined policy.	

Comparison between Simple and Advanced Retention Policy

Control	Simple	Advanced
Backup Jobs	Can keep the deleted files within 1 to 365 backup job(s)	Not applicable
Days	Can keep the deleted files within 1 to 365 day(s)	Can keep the deleted files within 1 to 365 day(s)
Туре	Not applicable	 Daily Weekly Monthly Quarterly Yearly Custom
User-defined name	Not applicable	Applicable

WARNING

When files and/or folders in the Retention Area exceed the Retention Policy setting, they will be permanently removed from the backup set and cannot be restored.

To configure a **Simple Retention Policy**, follow the steps below:

- 1. Go to Backup Sets, then select a backup set.
- 2. Click the **Retention Policy** tab in the Backup Set Settings.
- 3. Select **Simple** from the options, then click the drop-down button to define the number of day(s) or job(s) which the deleted files will be retained. This is configured as seven (7) days by default.

Space Freeing Up

To run a Retention Policy job manually via backup client interface, follow the steps below:

1. Click the **Utilities** icon in the AhsayOBM interface.

2. Select the **Space Freeing Up** tab in the Utilities settings.

3. Select the corresponding backup set and destination (e.g., AhsayCBS, local drive, cloud storage) where you want the Retention Policy job to run on, then click the **Start** button to run the Retention Policy.

NOTE

For more details about Space Freeing Up, refer to Chapter 9.9.2 Space Freeing Up.
Command Line Tool

This feature allows the user to configure a pre-backup or post backup command which can be an operating system level command, a script or batch file, or third-party utilities to run before and/or after a backup job.

e.g., Connecting to a network drive and disconnecting a network drive, stopping a third-party database (not officially supported by Ahsay) to perform a cold backup, and restarting a third-party database after a backup.

Requirements and Best Practices

Error and Exception Handling

Each pre-backup command or batch file should have an error and exception handling. If a pre-backup command contains an error, although an unhandled error may not hinder the backup job process, and the backup job is successful, it will result to a status indicating completed backup with warning(s). For more details about backup report status, please refer to Chapter 9.6 Report.

Command or Batch File Compatibility

Make sure that each command (pre-backup and post-backup) are tested thoroughly before including them to the backup job.

Scheduled Backup

If the scheduled backup job is set to stop after x no. of hours, make sure that the duration of the running backup job will not be affected. You may need to adjust the number of hours in the backup schedule configuration. Please refer to <u>Backup Schedule</u> for more details.

Pre-backup Command Limitation

A reboot or shutdown must not be used in the pre-backup command. Otherwise, the machine will shut down immediately that will result to a status indicating "Backup not yet finished", which can be viewed in the AhsayCBS User Web Console. Please refer to <u>AhsayCBS Backup Reports</u> for more details.

User Profile	Backup Restore				
Backup Set	Backup Report for This User				
Settings					
Report					View Today
Statistics	Backup Set	Destination	Start Time	End Time	Status
	Sample-2(1567584589206)	G AhsayCBS	04-Sep-2019 16:20		Backup not yet finished
Effective Policy	Daily Backup(1567576033951)	G AhsayCBS	04-Sep-2019 14:43		Backup not yet finished

Post-backup Command Recommendation

It is recommended to include a timeout for a post-backup command to shut down the machine.

This is to ensure that the AhsayOBM has enough time to complete the backup process in order to send the backup job status to the AhsayCBS before the machine shuts down.

There are three (3) fields in the command line tool:

Field	Description
Name	The user-defined name of the pre-backup or post-backup command.
Working Directory	The location in the local machine which the pre-backup or post-backup command will run at, or the location of the command or created batch file.
Command	The pre-backup or post-backup command which can be defined as a native command or batch file.

Pre-backup Command

A pre-backup command is used to execute an action or process before the start of a backup job. To create a pre-backup command, follow the steps below:

1. Click the [+] button.

2. Assign a desired name to the pre-backup command.

New	Pre-Backup	Command	Line Too	bl
Name				
Pre-Ba	ckup-1			

3. Click the **Change** button to locate the working directory of the command.

Working Directory

Change

4. Input a command to be run before a backup job. In this example, the pre-backup command will display the list of the directories.

Command		
ls –la		

- 5. Click the **OK** button to save the created pre-backup command, then click the **Save** button to save settings.
- 6. Once the backup job is complete, click the button to display the backup report log where you can check if the pre-backup command is successful.

Hide advanced settings	
Delete this backup set	Save Cancel

There are two (2) types of bandwidth control:

Bandwidth Control Type	Description
Independent	Each backup and restore has its assigned bandwidth.
Share	All backup and restore operations are sharing the same assigned bandwidth.

NOTE

Share mode does not support performing backup job on multiple destinations concurrently.

To enable the bandwidth control setting, follow the steps below:

1. Slide the lever to the right to turn on the bandwidth control.

Bandwidth Control
Limit the transfer rate when performing backup and restore tasks On

2. Select a bandwidth control mode.

3. Click the [+] button to create a modified bandwidth control.

- 4. Complete the following fields:
 - **Name** the name of the bandwidth control set.
 - **Type** the type of enforced bandwidth control period.
 - Maximum transfer rate the maximum bandwidth used.

00	AhsayOBM

	Kibit/s 🗸
	OK Cancel
Delete this backup set	Save

5. Click the **OK** button to save the created bandwidth control set, then click the **Save** button to save settings.

Others

Below is the list of other configurable options under the advanced backup set settings:

- <u>Temporary Directory</u>
- Follow Link
- <u>OpenDirect</u> (Not supported on macOS platform)
- <u>Compressions</u>
- Encryption
- Recycle Bin

Temporary Directory

The AhsayOBM uses the temporary directory for both backup and restore operations.

Temporary Directory	
Temporary directory for storing backup files	
/Users/admin/temp	Change
53.88GB free out of total 79.2GB space in /Users/admin/temp Remove temporary files after backup	

For a **backup job**, it is used to temporarily store backup set index files. An updated set of index files is generated after each backup job. The index files are synchronized to each individual backup destination at the end of each backup job.

For a **restore job**, it is used to temporarily store temporary restore files.

To change the temporary directory, follow the steps below:

1. Click the **Change** button to select a directory path for storing temporary data.

Temporary Directory	
Temporary directory for storing backup files	
/Users/admin/temp	Change
 53.88GB free out of total 79.2GB space in /Users/admin/temp ✓ Remove temporary files after backup 	

2. Locate the directory that you would like to use, then click **OK** to select the folder. Click the **Save** button to apply the settings.

Follow Link

This feature allows the user to enable or disable the follow link which defines the NTFS junction or symbolic link during a backup job. This feature is configured as enabled by default.

Follow Link			
Follow link of the backup files			
On 📃			

NOTE

This feature is only applicable for File Backup Sets.

OpenDirect

This feature is not supported on macOS platform.

Compressions

When this feature is enabled, the AhsayOBM will compress all files before it is backed up to the backup destination(s).

For newly created backup set(s), "Fast with optimization for local" is selected by default.

Compressions	
Select compression type	
Fast with optimization for local	~

The following are the four (4) compression types:

- No Compression file will not be compressed before backup.
- Normal compression is comparable to gzip Normal compression ratio.
- Fast (Compressed size larger than normal) compression will be faster but with less compression and lower CPU usage compared to Normal.
- Fast with optimization for local uses Snappy compression library when backing up to local
 destination only, otherwise setting will default to gzip if backing up to other destinations. Has the
 lowest CPU usage, very high speed and reasonable compression but compressed file size may
 be larger than Fast.

NOTE

The Compression type can be changed anytime even after a backup job. The modified compression type will be applied on the next run of a backup.

Encryption

This feature allows the user to view the current encryption settings. The encryption settings can only be enabled or disabled during the creation of backup set.

Encryption		
Encryption key Unmask encryption	key	
Algorithm	AES	
Method	CBC	
Key length	256 bits	

To view the Encryption key of the backup set, follow the steps below:

- 1. Go to Backup Sets, then select a backup set.
- 2. Click the **Others** tab in the backup set settings.
- 3. In the Encryption, click the 'Unmask encryption key' link to display the encryption key of the backup set.

Encryption key Unmask encryption	key
Algorithm	AES
Method	CBC
Key length	256 bits

Encryption

Encryption keyEqP4A5d/FJI3MzuL0xbQ9LoCbnu09H6GiNenBmJQmyA=Mask encryption keyAESAlgorithmAESMethodCBCKey length256 bits

NOTE

The encryption setting can only be configured during the creation of backup set. For more details about encryption settings, please refer to step no. **13** in <u>Chapter 10 Create a Backup Set</u>.

Recycle Bin

This feature is for protection of the BAK (block) files stored in the Backup Set's destination, allows the user to set the number of days BAK files that were deleted due to Retention Policy or Data Integrity Check, will be held under Recycle Bin as added protection.

This is how the Recycle Bin will treat deleted data:

- Data in the Recycle Bin will consume Quota.
- It does not move the data in another location within the storage, instead the index tracks the xxxxxx.bak files and its remaining time in the Recycle Bin.
- If the index is reverted to a previous timestamp, the settings of the Recycle Bin in the reverted index will be followed.
- Recoverability of data is not affected when the Recycle Bin is alternately enabled or disabled.
 - When enabled, it will only check if the data inside the Recycle Bin is still within the set number of days. Once it is beyond the set number of days it will only be deleted when the following operations are run: Backup, Space Freeing Up, Data Integrity Check and Delete Backup Data.
 - When disabled, if there are already deleted files it will not automatically delete the data inside the Recycle Bin. It will remain in the Recycle Bin even if it is beyond the set number of days. It will only be deleted when the following operations are run: Backup, Space Freeing Up, Data Integrity Check and Delete Backup Data.
- Once the Recycle Bin is disabled, deleted files will be removed immediately and will not be moved in the Recycle Bin.
- The setting applies to all destinations for the backup.
- Viewing Recycle Bin contents is not available.
- Recycle Bin cleanup is done at the start of the backup job process.
- Recovering from Recycle Bin requires reverting the index. For instructions on how to revert the index please refer to this article: <u>FAQ: How to un-delete backup data moved to Retention, or</u> revert indexes to a healthy state from an earlier successful backup.

WARNING

When reverting index, new data will be lost.

This is enabled by default set with 7 days.

Recycle Bin					
Move the file to the On	Recycle Bin when remove file from Retention Policy or DIC				
Keep the deleted files for					
7	day(s)				

To set the number of days, follow the steps below:

- 1. Go to Backup Sets, then select a backup set.
- 2. Click the **Others** tab in the backup set settings.
- 3. Under Recycle Bin, select the number of days or you can enter it manually.

9.6 Report

This feature allows user to run and view backup and restore reports.

There are two (2) options available for this feature:

- Backup
- Restore

9.6.1 Backup

This feature displays the backup report logs for each backup set. There are four (4) filters that can be applied on this feature:

- Date
- Backup set
- Destination
- Status

	No. of records per page 50 V Page 1/1 V
	Close

2. The Backup set, Destination, Log Date and Time, Status, the number of Logs per page, and Page can be filtered when viewing the restore report.

9.7 Restore

This feature is used to restore backed up files to its original or alternate location.

To restore backed up files, follow the instructions on Chapter 13 Restore Data.

9.8 Settings

This feature allows user to enable the **Proxy Settings**.

There are two (2) functions available for this feature:

- Proxy
- Mobile Backup

NOTE: The Mobile Backup tab will only be available if the mobile add-on module is enabled on the user profile. Please contact your backup service provider for details.

	AhsayOBM
Settings	Proxy (HTTP) Use proxy to access the Internet
Proxy	Off
Mobile Backup	
	Save

9.8.1 Proxy

When this feature is on, the AhsayOBM will gain access to the internet.

To enable the Proxy Settings, follow the instructions below:

1. Slide the lever to the right to turn it on.

- 2. Complete the following fields:
 - IP address
 - Port
 - Login ID
 - Password

Use proxy to access the Internet On	
IP address	Port
Login ID	
Password	
•••••	

- 3. Click the **Test Connection** button to validate the connection.
- 4. Click the **Save** button to apply the settings.

9.8.2 Mobile Backup

The Mobile Backup tab is only available if the mobile add-on module is enabled on the user profile. Please contact your backup service provider for details.

You can use the Mobile backup function to:

Add one or more device(s) registered for mobile backup.

NOTE Please refer to **Chapter 7** of the <u>Ahsay Mobile User Guide for Android and iOS</u> for the detailed step-by-step procedure.

- <u>View backed up photos, videos and documents saved in the mobile backup destination.</u>
- Change the mobile backup destination to:
 - new location in the same machine
 - <u>new machine</u>
- Remove one or more device(s) registered for mobile backup.

NOTE

For the restore of photos, videos, documents and 2FA accounts to an alternate mobile device, the other mobile devices must be registered first for mobile backup on AhsayOBM.

- Restore to a different mobile device on the same operating system.
- Restore to a different mobile device on another operating system, i.e., Android to iOS or iOS to Android.

View backed up photos, videos and documents saved in the mobile backup destination

To view backed up photos, videos and documents saved in the mobile backup destination, follow the instructions below:

1. Either click the link under the registered mobile device or click the **Browse** icon on the right side of the registered mobile device.

2. A new window will be displayed, double-click the **blocks** folder. Double-click the folder named in this format "YYYY-MM-DD-hh-mm-ss" which is the date and time of the backup, this contains the folders where the photos and videos are saved.

Change mobile backup destination location to new location in the same machine

These are scenarios upon changing the mobile backup destination to a new location in the same local machine:

• Move to a new location in the same machine with enabled Free up space.

If Free up space is enabled on the Ahsay Mobile app, it is strongly recommended to copy the previously backed up photos, videos, documents and 2FA accounts to the new location to prevent missing data. As some of the backed up photos, videos, documents and 2FA accounts have already been removed from the mobile device.

In case the previously backed up photos, videos and 2FA accounts were not copied to the new location, even though the backup will re-upload all the photos, videos, documents and 2FA accounts again from the mobile device, this will not include the photos, videos, documents and 2FA accounts removed by the Free up space feature.

Move to a new location in the same machine with disabled Free up space

If Free up space is disabled on the Ahsay Mobile app, there are two (2) options available, copy the previously backed up photos, videos, documents and 2FA accounts to the new location or continue to back up in the new location.

In case the previously backed up photos, videos, documents and 2FA accounts were not copied to the new location, the backup will re-upload all the photos, videos, documents and 2FA accounts again from the mobile device.

To change the mobile backup destination to another drive or folder on the AhsayOBM machine, follow the instructions below:

Example: Change backup destination

from

/Users/admin/Documents/AhsayOBM/\$registered_mobile_device/\$backupsetID

to

/Users/admin/Documents/MobileBackup

- 1. From the old location, secure a copy of the previously backed up photos, videos, documents and 2FA accounts.
- 2. Copy the previously backed up photos, videos, documents and 2FA accounts from the original location to the new mobile backup destination (if applicable).

3. Go to **Settings** > **Mobile Backup**. Click the **Edit** icon on the right-side of the registered mobile device.

In this example, the old mobile backup destination is /Users/admin/Documents/AhsayOBM/\$registered_mobile_device/\$backupsetID.

Settings	Mobile Backup Registered Mobile Device(s)	
Proxy	A32 /Users/admin/Documents/AhsayOBM/A32/1631177975128	🖻 🖉 🟛
Mobile Backup	Add or migrate device	Edit
		Save Cancel

- 4. A new screen will be displayed. Select the new mobile backup destination then click **Open**.
- 5. Click **Save** to store the change made.

Mobile backup destination is successfully changed to /Users/admin/Documents/MobileBackup. All mobile backups will now be saved to this destination.

The \$registered_mobile_device and \$backupsetID will be appended automatically to the new
mobile backup destination.

6. Resume the backup job.

Change mobile backup destination location to new machine

Move to a new machine with enabled or disabled Free up space due to upgrade.

If the machine needs upgrading, the previously backed up photos, videos, documents and 2FA accounts are still available.

If Free up space is enabled on the Ahsay Mobile app, it is strongly recommended to copy the previously backed up photos, videos and 2FA accounts to the new machine to prevent missing data. As some of the backed up photos, videos, documents and 2FA accounts have already been removed from the mobile device.

Even if Free up space is disabled, it is recommended to copy the previously backed up photos, videos, documents and 2FA accounts to the new machine. Otherwise, the backed up photos, videos, documents and 2FA accounts on the mobile device will be backed up again from scratch.

NOTE

- If the machine is lost/stolen, changing the mobile destination is not supported as it is required to reregister your mobile devices on AhsayOBM and perform backup of backed up photos, videos, documents and 2FA accounts.
- Changing the mobile backup destination to a new machine with a different operating system is supported, e.g. from a macOS machine to Window machine or Linux machine to macOS machine etc.

To change the mobile backup destination to a new machine, follow the instructions below: **Example:** Changing the mobile backup destination from an old macOS machine to a new Windows machine.

1. On the new machine, install AhsayOBM.

2. Copy the .obm folder from the old macOS machine to the new Windows machine.

3. Copy the previously backed up photos, videos, documents and 2FA accounts from the old machine to the new mobile backup destination.

NOTE
During machine upgrade, make sure to uninstall the AhsayOBM from the old
machine to avoid any interruptions while backing up on the new machine.

4. Restart the **AhsayOBM Services** because copying the **.obm** folder on a newly installed AhsayOBM will not trigger the MBS.

9.9 Utilities

This feature allows user to perform quality check on the backed up data, free up storage from obsolete files, delete, and decrypt backed up data.

There are four (4) options available for this feature:

- Data Integrity Check
- Space Freeing Up
- Delete Backup Data
- Decrypt Backup Data

9.9.1 Data Integrity Check

The Data Integrity Check (DIC) is used to identify the data in the backup set that has index-related issues, remove any corrupted file(s) from the backup destination(s) to ensure the integrity of the backup data and its restorability, and update the storage statistics.

For an efficient management of overall storage size of the backup destination(s), the Data Integrity Check job will perform check for the backup destination(s) to remove old index files that are more than ninety (90) days old in the backup job folder(s).

Utilities	Data Integrity Check
Data Integrity Check	Perform health check for your backed up data to ensure the data integrity and restorability Select a backup set
Space Freeing Up Delete Backup Data Decrypt Backup D	All Run Cyclic Redundancy Check (CRC) during data integrity check Rebuild index Delete corrupted data blocks permanently Start
	Close

NOTES

- 1. Data Integrity Check CANNOT fix or repair files that are already corrupted.
- 2. Data Integrity Check can only be started if there is NO active backup or restore job(s) running on the backup set selected for the DIC job. As the **backup**, **restore** and **data integrity check** are using the same index for read and write operations. Otherwise, an error message will be displayed in the post-DIC to indicate that the data integrity check is completed with error(s) and had skipped a backup set with an active backup job.

Run Cyclic Redundancy Check (CRC)

When this option is enabled, the DIC will perform check on the integrity of the files on the backup destination(s) against the checksum file generated at the time of the backup job.

If there is a discrepancy, this indicates that the files on the backup destination(s) are corrupted and will be removed from the backup destination(s). If these files still exist on the client machine on the next backup job, the AhsayOBM will upload the latest copy of the files.

However, if the corrupted files are in the Retention Area, they will not be backed up again as the source file has already been deleted from the client machine.

The time required to complete a Data Integrity Check depends on the number of factors such as:

- number of files and/or folders in the backup set(s)
- bandwidth available on the client computer
- hardware specifications of the client computer such as, the disk I/O and CPU performance

NOTE

For user(s) with metered internet connection, additional data charges may be incurred if the Cyclic Redundancy Check (CRC) is enabled. As CRC data involves downloading the data from the backup destination(s) to the client machine in order to perform this check.

Rebuild index

When this option is enabled, the Data Integrity Check will start rebuilding corrupted index and/or broken data blocks if there are any.

Delete corrupted data blocks permanently

When this option is enabled, it overrides the Recycle Bin setting of the backup set. The DIC will delete corrupted data blocks permanently instead of moving it to the Recycle Bin.

There are four (4) options in performing the Data Integrity Check:

Settings	Function
Option 1	For checking of index and data.
Rebuild index Delete corrupted data blocks permanently	
Start	
Option 2 Run Cyclic Redundancy Check (CRC) during data integrity check Rebuild index Delete corrupted data blocks permanently Start	For checking of index and integrity of files against the checksum file generated at the time of the backup job.
Option 3 ☐ Run Cyclic Redundancy Check (CRC) during data integrity check ✔ Rebuild index ☐ Delete corrupted data blocks permanently	For checking and rebuilding of index.
Start Option 4	
 Run Cyclic Redundancy Check (CRC) during data integrity check Rebuild index Delete corrupted data blocks permanently Start 	For checking of index, integrity of files against the checksum file generated at the time of the backup job and rebuilding of index.

The following diagrams show the detailed process of the Data Integrity Check (DIC) in four (4) modes:

- Option 1
 Disabled Run Cyclic Redundancy Check (CRC) and Rebuild index (Default mode)
- Option 2
 <u>Enabled</u> Run Cyclic Redundancy Check (CRC) and <u>Disabled</u> Rebuild index
- Option 3

Disabled Run Cyclic Redundancy Check (CRC) and Enabled Rebuild index

• <u>Option 4</u>

Enabled Run Cyclic Redundancy Check (CRC) and Rebuild index

Option 1 - Data Integrity Check (DIC) Process with Run Cylic Redundancy Check (CRC) and Rebuild index <u>DISABLED</u> (Default mode)

Option 2 - Data Integrity Check (DIC) Process with Run Cylic Redundancy Check (CRC) **ENABLED** and Rebuild index **DISABLED**

Option 3 - Data Integrity Check (DIC) Process with Run Cylic Redundancy Check (CRC) **DISABLED** and Rebuild index **ENABLED**

Option 4 - Data Integrity Check (DIC) Process with Run Cylic Redundancy Check (CRC) and Rebuild index **ENABLED**

Perform a Data Integrity Check

To perform a Data Integrity Check, follow the instructions below:

1. Go to the **Data Integrity Check** tab in the Utilities menu.

2. Click the drop-down button to select a backup set.

3. Click the drop-down button to select a backup destination.

- 4. Click the Start button to begin the Data Integrity Check.
- 5. The Data Integrity Check will start running on the selected backup set(s) and backup destination(s).

6. Once the DIC is completed, click the **View log** button to check the detailed process of the Data Integrity Check.

Data Integrity Check Completed with Errors

The following screenshot is an example of a Data Integrity Check completed with error(s). A Data Integrity Check is run on a backup set with an active backup job running which resulted the Data Integrity Check to stop with error(s).

Utilities	Data Integrity Check
Data Integrity Check	Perform health check for your backed up data to ensure the data integrity and restorability Select a backup set
Space Freeing Up	Backup Set 5
Delete Backup Data	Select a destination
Decrypt Backup D	 Run Cyclic Redundancy Check (CRC) during data integrity check Rebuild index Delete corrupted data blocks permanently X Data Integrity Check is completed with error(s) View log
	Close

Clicking the View log button will display the details of the Data Integrity Check job error(s).

Data Integrity Check Result

There are two possible outcomes after the completion of a Data Integrity Check:

- Data Integrity Check is completed successfully with no data corruption or index-related issues detected;
- Corrupted data (e.g., index files, checksum files and/or broken data blocks) has been detected

The screenshot below shows an example of a Data Integrity Check log with NO data corruption or index-related issues detected.

If any index-related error(s) or data corrupted item(s) is found, the **(TEST MODE)** confirmation screen will be displayed.

• • •	Ahs	ayOBM			
Utilities	Data Inte	grity Check			
	Perform health	check for your b	backed up data to	ensure the data in	ntegrity and
	ita integrity check (TEST M s, checksum incorrect item int to continue?				
Backup set: Sample Bac					
Destination	Items found in index	Data corrupted items	Index broken data blocks	Statistics	
AhsayCBS	368 (130.4MB)	181 (111.3MB)	23 (490.1MB)	Incorrect	
* File count (File size)					
				Yes No	View log

This is to inform the user of the following details:

- Backup set that contains an error
- Backup Destination
- Items found in index
- Data corrupted items
- Index broken data blocks
- Statistics (i.e. Correct or Incorrect)

Test Mode Confirmation

The (TEST MODE) confirmation screen will ONLY appear if either of the **criteria** below matches the backup data during the Data Integrity Check process:

- deleted number of backup files is over 1,000
- deleted number of backup file size is over 512 MB (in total)
- deleted number of backup files is over 10% of the total backup files

Otherwise, the Data Integrity Check job will automatically take corrective actions.

There are three (3) options on the (TEST MODE) confirmation screen:

Option	Screenshot	Function
Yes	Yes	Corrupted data (e.g. index files, checksum files and/or broken data blocks) will be deleted and storage statistics will be updated.
No	Νο	No action(s) will be taken and a message will prompt.
View log	View log	The detailed log of the Data Integrity Check process will be displayed.

Clicking No will display the following screen:

• • •	AhsayOBM
Utilities	Data Integrity Check
Data Integrity Check	Perform health check for your backed up data to ensure the data integrity and restorability Select a backup set
Space Freeing Up	
Delete Backup Data	
updated. You are recommer	k was completed in TEST MODE only. NO changes have been aded to continue in order to delete data corrupted items, items, index broken data blocks and rebuild the index. nt to exit? Exit Back

If the **Exit** button is clicked, the Data Integrity Check result will be discarded.

If the **Back** button is clicked, it will go back to the (TEST MODE) confirmation screen.

NOTES

- It is strongly recommended to apply corrective actions when the (TEST MODE) confirmation screen pops up (clicking the Yes button). This is to ensure that the remaining corrupted file(s) will be removed from the backup destination(s), therefore on the next backup job, these files are backed up again if they are still present on the client machine. However, if the corrupted files are in Retention Area, then they will not be backed up again as the source file has already been deleted from the client machine.
- 2. If the DIC detects data blocks (.bak files) in the backup destination(s) that do not have related index entries, then these physical data blocks will be **automatically** removed from the backup destination(s) without the (TEST MODE) prompt.

Aside from viewing the Data Integrity Check logs directly on AhsayOBM client, they can also be viewed on the file system of the AhsayOBM client machine. For AhsayOBM on macOS, the DIC logs are located in the following directory:

9.9.2 Space Freeing Up

This feature is used to remove obsolete file(s) from your backup set and destination (manually start Retention Policy). After the Space Freeing Up job is completed, the storage statistics of the backup set(s) are updated.

To perform Space Freeing Up, follow the instructions below:

1. Select a backup set from the drop-down list.

	AhsayOBM
Utilities	Free Up Storage Space
Data Integrity Check	To remove obsolete files from your backup destination according to your retention policy setting to free up your storage space, select backup set(s), destination(s) and then press Start.
Space Freeing Up	Select a backup set
Delete Backup Data Decrypt Backup D	All All Daily Backup AhsayOBM Backup Files Backup OBM Backup
	Close

If you select a specific backup set, then you will also have to select a specific destination or all destinations.

•••	AhsayOBM

Delete Backup Data	Select a destination
Decrypt Backup D	All All AhsayCBS GoogleDrive-1 Local-1 (/Users/admin/Documents/Office 365)
	Close

If you select All backup sets, then there is no need to select a destination.

2. Click the Start button to perform space free up.

3. The status will be shown once completed. Click the **View log** button to see the detailed report of the space freeing up job.

9.9.3 Delete Backup Data

This feature is used to permanently delete backed up data from a backup set(s), destination(s), backup job, or delete all backed up data. After the data is deleted, the storage statistics of the backup set(s) are updated.

To perform deletion of backup data, follow the instructions below:

1. Select a backup set from the drop-down list.

	AhsayOBM
Utilities	Delete Backup Data
Data Integrity Check Space Freeing Up	Delete backed up data of a specific backup set from a specific destination. This action will physically delete the selected data regardless the defined retention policy. Therefore, make sure you know what you are deleting and NO undo will be available afterward. Select a backup set
Delete Backup Data	All
Decrypt Backup D	Daily Backup AhsayOBM Backup Files Backup OBM Backup
	Close

NOTE

This will only delete the backed up files in a backup set(s) and destination(s), but the backup set and destination will remain.

If you select a specific backup set, then you will also have to select a specific destination or all destinations.

If you select All backup sets, then there is no need to select a destination.

2. If you choose to delete **All** backup set(s), the following message will be displayed. By clicking **Yes**, all backed up files from the selected backup set(s) and destination(s) will be deleted.

If you select a specific backup set, you will have an option to choose a destination.

	AhsayOBM
Utilities	Delete Backup Data
Data Integrity Check Space Freeing Up	Delete backed up data of a specific backup set from a specific destination. This action will physically delete the selected data regardless the defined retention policy. Therefore, make sure you know what you are deleting and NO undo will be available afterward. 9.9.4 Decrypt Backup Data

This feature is used to restore raw data by using the **data encryption key** that was set for the backup set.

To perform decryption of backup data, follow the instructions below:

1. Click the **Browse** button to locate the path of the backup set ID / blocks folder.

• • •	AhsayOBM
Utilities	Decrypt Backup Data Please enter the path to the [<backup id="" set="">/blocks] folder which contains the</backup>
Data Integrity Check	backup files that you want to decrypt. Browse
Space Freeing Up	Temporary directory for storing restore files
Delete Backup Data	/Users/admin/.obm/temp Browse
Decrypt Backup D	Decrypt
	Close

2. Enter the path of the folder which contains the backup files you want to decrypt. Click **Decrypt** to start decrypting backup data.

•••	AhsayOBM
Utilities	Decrypt Backup Data
Data Integrity Check Space Freeing Up	Please enter the path to the [<backup id="" set="">/blocks] folder which contains the backup files that you want to decrypt. /Users/admin/Downloads Browse Temporary directory for storing restore files</backup>
Delete Backup Data	/Users/admin/.obm/temp Browse
Decrypt Backup D	Decrypt
	Close

10 Create a Backup Set

1. Click the Backup Sets icon on the main interface of AhsayOBM.

3. When the Create Backup Set window appears, name your new backup set, and select the **Backup set type**. Then, click **Next** to proceed.

	AhsayOBM
	Create Backup Set
Name	
BackupSet-1	
Backup set typ	
File Back	p 🗸
	Next Cancel

4. In the Backup Source window, select the source files and folders for backup. Click **I would like to choose the files to backup** to select individual files for backup.

AhsayOBM
Backup Source
Select the files and folders that you want to backup Image: Desktop Im
Filter Apply filters to the backup source Off
Previous Next Cancel

5. In the Advanced Backup Source window, select folder(s) to back up all files in the folder(s).

6. Alternatively, if you want to back up only specific files instead of all files in your selected folder(s), select the Show files checkbox at the bottom of the screen. A list of files will appear on the right-hand side. Select the checkbox(es) next to the file(s) to back up. Then, click OK to save your selections and close the Advanced Backup Source window.

- 7. In the Backup Source window, click **Next** to proceed.
- 8. In the Schedule window, you can configure a backup schedule to automatically run a backup job at your specified time interval. In the Schedule window, the Run scheduled backup for this backup set is **Off** by default.

When the New Backup Schedule window appears, specify your backup schedule. Then, click **OK** to save your changes and close the New Backup Schedule window.

Name Daily-1 Type Daily • Start backup at • 09 •: 27 • Stop until full backup completed • Run Retention Policy after backup	
	OK

9. In case you have added a schedule, it will be shown in the Schedule window. Click **Next** to proceed when you are done setting.

User password	ł							
Custom								

You can choose from one of the following three Encryption Type options:

- Default an encryption key with 44 alphanumeric characters will be randomly generated by the system
- User password the encryption key will be the same as the login password of your AhsayOBM at the time when this backup set is created. Please be reminded that if you change the AhsayOBM login password later, the encryption keys of the backup sets previously created with this encryption type will remain unchanged.
- Custom you can customize your encryption key, where you can set your own algorithm, encryption key, method, and key length.

Encryption	
Encrypt Backup Data On Encryption Type Custom Algorithm AES Encryption key	
•••••

11 Overview on Backup Process

The following steps are performed during a backup job. For an overview of the detailed process for Steps **3**, **5**, **10**, and **12**, please refer to the following chapters.

- Periodic Data Integrity Check (PDIC) Process (Step 3)
- Backup Set Index Handling Process
 - Start Backup Job (Step 5)
 - Completed Backup Job (Step 12)
- Data Validation Check Process (Step 10)

11.1 Periodic Data Integrity Check Process

For AhsayOBM v8.3.6.0 (or above), the PDIC will run on the first backup job that falls on the corresponding day of the week from **Monday to Friday**.

To minimize the impact of the potential load of large number of PDIC jobs running at the same time on the AhsayCBS server, the schedule of a PDIC job for each backup set is automatically determined by the result of the following formula:

PDIC schedule = \$BackupSetID modulo 5	
or	
\$BackupSetID mod 5	

The calculated **result** will map to the corresponding day of the week (i.e., from Monday to Friday).

0	Monday
1	Tuesday
2	Wednesday
3	Thursday
4	Friday

NOTE: The PDIC schedule cannot be changed.

Example:

Backup set ID: 1594627447932

Calculation: 1594627447932 mod 5 = 2

In this example:

- the PDIC will run on the first backup job that falls on Wednesday; or
- if there is no active backup job(s) running from Monday to Friday, then the PDIC will run on the next available backup job.

NOTES

Although according to the PDIC formula for determining the schedule is **\$BackupSetID mod 5**, this schedule only applies if the previous PDIC job was actually run more than 7 days prior. Under certain conditions, the PDIC may not run strictly according to this formula. For example:

- 1. The PDIC job will run on the first backup job after upgrade to the latest client version from AhsayOBM v6, v7, or pre-8.3.6.0 version.
- 2. If backup jobs for a backup set are not run on a regular daily backup schedule (for example: on a weekly or monthly schedule), then the PDIC job will run if it detects that the previous PDIC job was run more than 7 days ago.
- 3. Every time a Data Integrity Check (DIC) is run, the latest PDIC run date is reset, the next PDIC job will run after 7 days.
- 4. The PDIC job will not run if there are no files in both the Data and Retention Areas. For example: a newly created backup set with no backup job history or a backup set where all the data has been deleted using the <u>Delete Backup Data</u> feature.
- 5. The PDIC job will not run on a backup set that contains any data which still in v6 format. It will only run if all v6 data format on a backup set has undergone data migration to v9 block format.

11.2 Backup Set Index Handling Process

To minimize the possibility of index related issues affecting backups, each time index files are downloaded from and uploaded to backup destination(s); the file size, last modified date, and checksum is verified to ensure index file integrity.

11.2.1 Start Backup Job

11.2.2 Completed Backup Job

11.3 Data Validation Check Process

As an additional measure to ensure that all files transferred to the backup destination(s) are received and saved correctly, both the number of 32 or 64MB data block files and the size of each block file are checked again after the files are transferred.

12 Run Backup Jobs

12.1 Login to AhsayOBM

Login to the AhsayOBM application according to the instructions in <u>Chapter 7 Login to</u> <u>AhsayOBM</u>.

12.2 Start a Manual Backup

1. Click the **Backup** icon on the main interface of AhsayOBM.

2. Select the backup set which you would like to start a backup for.

• • •	Andyouth

	🗆 🖺 File3.txt	10.96 KB05/10/2022 13:43

The following is an example showing all the available backup versions of the file **File1.txt**. The latest version is shown in solid black color and all the previous versions are shown in grey color. You can identify the file version from the **Date modified** column.

Name	Size	Date modified
File1.txt	8.72 KB	05/10/2022 13:52
File1.txt	9.54 KB	05/10/2022 13:48
File1.txt	7.11 KB	05/10/2022 13:34

When the restore is done, you will see all the selected backup versions in the restore destination. The latest backup version has the file name as the original file, while the previous versions have the time stamps added to their file names for easy identification.

Name	~	Date Modified	Size	Kind
File1.txt		Today, 1:52 PM	7 KB	Plain Text
File1_2022-10-05-13-51-34.txt		Today, 1:48 PM	10 KB	Plain Text
File1_2022-10-05-13-46-05.txt		Today, 1:34 PM	9 KB	Plain Text

Click **Next** to proceed when you are done with the selections.

- 6. Select to restore the files to their **Original location**, or to an **Alternate location**. Then, click **Next** to proceed.
 - **Original location** the backed-up data will be restored to the computer running the AhsayOBM under the same directory path as on the machine storing the backup source.

For example, if the backup source files are stored under the Users/[User's Name]/Downloads folder, the data will be restored to the Users/[User's Name]/Downloads as well on the computer running the AhsayOBM.

•	AhsayOBM	
Choose Whe	ere The Files T	o Be Restored
Restore files to Original location 		
 Alternate location 		Browse
Show advanced option		
		Previous Restore Ca

 Alternate location – you can choose to restore the data to a location of your choice on the computer where AhsayOBM is running.

7. Click Show advanced option to configure other restore settings:

Delete unmatched data in restore location
 Verify checksum of in-file delta files during restore
 Hide advanced option

Delete unmatched data in restore location

By enabling this option, the restore process will attempt to synchronize the selected restore source with the restore destination, making sure the data in the restore destination is the same as the restore source. Any data created after backup will be treated as "unmatched data" and will be deleted from the restore source if this feature is enabled.

Example:

i) Two files are created under the Document folder 01, namely doc 1 & doc 2.

- ii) A backup is performed for folder **Document folder 01**.
- iii) Two new files are created, namely doc 3 & doc 4.

	Document folder 01	
Name		^
doc 1.docx		
doc 2.docx	Files created BEFORE backup	
doc 3.docx		
doc 4.docx	 Files created AFTER backup 	
auc 4.docx		

- iv) A restore is performed for the **Document folder 01**, with **Delete unmatched data in restore location** option enabled.
- v) Since doc 3 & doc 4 have never been backed up, therefore they will be deleted from **Document folder 01**, leaving only the two files that have been backed up.

	^
E Flies remain atter restore	
	cx Files remain after restore

WARNING

Please exercise extra caution when enabling this feature. Consider what data in the restore source has not been backed up and what impact it would cause if those data were deleted. Prior to the data restore and synchronization, a warning message shows as the one shown below. Only clicking **Yes** will the "unmatched data" be deleted. You can click **Apply to all** to confirm deleting all the "unmatched data" at a time.

Verify checksum of in-file delta files during restore

Verify checksum of in-file delta files during restore is disabled by default. When you perform restore for non-RunDirect backup set, you can enable the feature by ticking the checkbox so that the checksum of in-file delta files will be verified. As the feature will make the restore process time longer, it is recommended to enable the feature only if you want to verify if the merged file were correct.

8. Click the **Restore** button to start the restore job.

13.3 Restore Filter

This search feature allows you to search directories, files, and folders.

To make it more flexible, the search feature offers filtering. You can add additional pattern upon searching. Pattern includes the following criteria:

Contains

These are Directories, Files, and Folders with the name containing the specific letter or word.

Exact

These are Directories, Files, and Folders with the exact or accurate name.

Start With

These are Directories, Files, and Folders with the name starting with a specific letter or word.

Ends With

These are Directories, Files, and Folders with the name **ending** with a specific letter or word.

It also has the **Match Case** function, which serves as an additional accuracy when searching for any specific directories, files, folders, and mails.

For more detailed examples using the restore filter on AhsayOBM, refer to <u>Appendix B: Example</u> <u>Scenarios for Restore Filter</u>.

Follow the steps below to use the search feature:

1. Login to AhsayOBM according to the instructions in Chapter 7 Logging in to AhsayOBM.

AbsavOBM

- 2. Click the Restore icon on the main interface of AhsayOBM.
- 3. Select the backup set that you would like to restore.

12. Check all the items or check a specific item, then click the **OK** button to proceed and return to the restore main screen.

14 Mobile Backup and Restore to AhsayCBS and Predefined Destination

To perform a mobile backup and restore to AhsayCBS and/or Predefined Destination, follow the instructions below:

- Back up photos, videos, documents and 2FA accounts from Ahsay Mobile app to AhsayOBM local destination. For more detailed information, refer to Chapter 10 of the <u>Ahsay Mobile User Guide for Android and iOS</u>.
- 2. Create a File backup set according to the instructions in <u>Chapter 10 Create Backup Set</u> with the following setup:
 - The backup source should be the photos, videos, documents and/or 2FA account(s) backed up in the AhsayOBM local destination. In this example, the backup source is located in:

• • •	AhsayOBM	
	Advanced Backup Source	
	Show files	
	[OK Cancel
	Previous	Next Cancel

/Users/admin/Documents/AhsayOBM/\$mobile_device

The backup destination must be AhsayCBS and/or Predefined Destination (i.e., Google Drive, OneDrive, Wasabi, etc.)

AhsayOBM
Destination
Backup mode Sequential Constraints Existing storage destinations Constraints AhsavCBS Host: 10.3.121.17:80 Constraints Const
Previous Next Cancel

 After creating the backup set, run a backup job according to the instructions in <u>Chapter</u> <u>12.2 Start Manual Backup</u>. Below is an example of a backup report for mobile backup data.

4. Restore data according to the instructions in Chapter 13.2 Restore Data.

There are two (2) options to restore data from AhsayCBS and/or Predefined Destination to the mobile device, Original location, and Alternate location.

 Original location - data will be restored on the original location which is the backup destination for your mobile device.

Using this option, you can perform seamless restore to your mobile device as the location is the same with the mobile backup destination.

 Alternate location - data will be restored on an alternate location which can be setup anywhere in the AhsayOBM local machine. If you choose this option, then restoring to your mobile device will have to be manually done. There are two (2) options available.

NOTE: Restore to alternate location is not supported on another AhsayOBM machine. Options 1 and 2 must be on the original machine where the backups were performed.

In case the original machine is no longer available, AhsayOBM will be able to restore the photos, videos and 2FA accounts from AhsayCBS or Predefined Destination to the mobile backup destination folder. However, as the mobile devices were not originally paired with the new installation or machine, the mobile devices will not be able to restore the photos, videos and 2FA accounts from the AhsayOBM.

• **Option 1:** Copy the restored data from the alternate location to the original location which is the **backup destination for your mobile device**.

Example of the Alternate location:

/Users/admin/Alt Location

• • •	Untitled

Example of the Original location:

/Users/admin/Documents

You can now use the Ahsay Mobile app to restore the photos, videos, documents and 2FA accounts back to your mobile device.

• **Option 2:** Copy the restored data from the alternate location to your Android or iOS mobile device.

Instructions:

• For an Android device, you need to plug your cable and transfer the restored data from the alternate location to your mobile device storage.

Example of the Alternate location: /Users/admin/Alt Location

Explanation:

All files and directories under <u>/Users/admin/Documents/My Documents/TestFiles</u> that has the pattern that contains with 'Set' with match case set to true will be included upon performing search.

As you can see on the screen shot above, the result panel contains the Name of the file or directory, Directory which are indicated In-Folder column, Size, and Date Modified.

The restore filter setting includes the Search subfolder and Match case set to true. This means that the filter will include all available subfolders in /TestFiles upon searching. And it will strictly search only the specified pattern and case which starts with 'Set'.

Example No.2: Restore filter setting from /Users/admin/Documents/My Documents/TestFiles with filter type Starts With

Location:	/Users/admin/Documents/My Documents/TestFiles
Search subfolders:	True
Kind:	Files
Туре:	Starts With
Pattern:	A
Match Case:	True

Follow the step-by-step procedure indicated on <u>Restore Filter</u>.

	Search Look in /Users/admin/Documents/My Documents/TestFiles ✓ Search subfolders Kind Type Files and Directories ends with ♥ g ✓ Match case Search Search AlertMessage0001.jpg /Users/admin/Documents/My Documents/TestFiles AlertMessage0003.jpg /Users/admin/Documents/My Documents/TestFiles AlertMessage0004.jpg /Users/admin/Documents/My Documents/TestFiles AlertMessage0005.jpg /Users/admin/Documents/My Documents/TestFiles 490 K8 27/08/2019 18:11	el

Explanation:

All files and directories under <u>/Users/admin/Documents/My Documents/TestFiles</u> that has the pattern that ends with 'g' with match case set to true will be included upon performing search.

As you can see on the screen shot above, the result panel contains the Name of the files and directories, Directory which are indicated In-Folder column, Size, and Date Modified.

The restore filter setting includes the Search subfolder and Match case set to true. This means that the filter will include all available subfolders in /TestFiles upon searching. And it will strictly search only the specified pattern and case which starts with 'g'.

Example No.4: Restore filter setting from /Users/admin/Documents/My Documents/TestFiles with filter type Exact

Location:	/Users/admin/Documents/My Documents/TestFiles
Search subfolders:	True
Kind:	Files and Directories
Туре:	Exact
Pattern:	SpreadSheet_05.xlsx
Match Case:	True

Follow the step-by-step procedure indicated on Restore Filter.

Appendix C: Setting up Full Disk Access Permission

What is Full Disk Access? Full Disk Access is a new security feature in macOS 10.15 or higher that requires some applications to be given full permission to access your protected files and have certain administrative settings available.

Here are the steps on how to setup and grant AhsayOBM and java Full Disk Access:

1.

2. Select the **Privacy** tab.

3. Select Full Disk Access, then click the lock icon.

	Security & Privacy	Q Search — —
General	FileVault Firewall Privac	y
Microphone	Allow the apps below to acc Messages, Safari, Home, Tir certain administrative setting	ne Machine backups and
Accessibility	Mac.	
Input Monitoring

Appendix D: Create Free Trial Account in AhsayOBM

Users can create a free trial account when they login to AhsayOBM for the first time. Please ensure that the following requirements are met before creating your trial account:

 A valid email address which will be used for receiving notices. A welcome message will also be sent upon creation of the account which specifies the User Setting and Quota set for backup in AhsayCBS.

While here are the limitations of a trial account:

- The Free Trial button will only be displayed once when the user login for the first time. If you cannot create a free trial account kindly contact your backup service provider.
- Only alphanumeric characters and selected special characters, A to Z, 0 to 9, @, and _, are allowed to be used for the Login name. While there may be some limitations on password complexity and age which is determined by the backup service provider. Please contact your backup service provider for further details.
- The add-on modules available and quota size are determined by your backup service provider.
- The trial account period is determined by your backup service provider. Please contact your backup service provider for details.

NOTE
The Free Trial Registration option may not be available. This depends on the settings of your backup service provider. Please contact your backup service provider for more information.
backup service provider. I lease contact your backup service provider for more information.

Follow the steps below to create a Free Trial backup account in AhsayOBM.

1. Click on Free Trial.
